HNS – The Applied Scientific Research Center has just released a powerful new weight loss product proven to melt unsightly body fat. Dieters are clogging up phone lines in hopes of getting their supply before inventory runs out.

The company has reportedly discovered an ingredient that dieters are eager to try, especially those who have been frustrated by ineffective options in the past.

The product featuring this new ingredient is called OxiTrim. The clinical trials show the product works great for anyone, but the company is particularly excited about its ability to help dieters over 50 because they are such an ideal match for the product's main benefit – a faster fat-melting metabolism.

According to the head of product development, Anne Evans, "When you have 15-35 pounds to lose, a faster metabolism is the key to reaching your goal, especially if you're trying to avoid intense workouts. And if you've got more than 35 pounds to lose, there's a good chance your slow metabolism is to blame."

Why Dieters Are So Excited

Researchers who discovered this new ingredient believe it triggers weight loss by helping your metabolism work like it did when you were younger. "As we age, we tend to store more food as fat, even when eating smaller amounts," said Chief Researcher, Tom Ferguson. OxiTrim sparks weight loss by helping the body process food the way it used to.

Early users of OxiTrim are experiencing real weight loss for the first time in years. Many are noting it's the first time they've seen results without starving themselves or massive dietary changes. Best of all, noticeable inches are coming off and smaller clothes are fitting again.

"Around 40 years old, it got harder to stay thin, and after menopause it felt like my metabolism took a nosedive. After years of gaining weight, I'm finally able to fit into my old jeans and the pooch at the top of my stomach is gone!" said Mary L. from Minneapolis, an early user of OxiTrim.

Impressive 8 Week Study

The 8-week clinical study was carried out by scientists at the Department of Nutrition at the University of California

POWERFUL PILL: Researchers from the Applied Scientific Research Center have approved the release of a powerful new diet pill called OxiTrim. University of California clinical study shows users lose 12-lbs in 8-weeks without dieting or working out.

Davis. The results were published in the *Journal of Medicinal Food* as well as *Obesity Journal*.

The randomized, double-blind study involved subjects who were given either the primary ingredient found in OxiTrim, or a placebo, twice daily. Participants received a normal 2,000 calorie diet and walked for 30 minutes, 5 days a week

The results were extraordinary.

Participants taking the new ingredient lost almost 4 times as much weight as their placebo-taking counterparts. Perhaps even more exciting for those struggling with weight loss is that subjects lost a remarkable 4.7 inches around their waist without grueling workouts or massive dietary changes. This equates to 2 pants sizes for men and 4-6 dress sizes for women!

"People always wonder 'will it work for me?'" said Co-Founder Michael Kenneth. "After they see these clinicals they can't wait to try it for themselves. They have hope again. We believe this is the big driver behind the crazy demand we've seen for OxiTrim," he added.

How It Triggers Weight Loss

The active ingredient featured in OxiTrim comes from a plant that grows in India called *Sphaeranthus Indicus*. Native Indians have used it for centuries for a wide variety of ailments, but new research points to it being a powerful tool in the fight against obesity.

Unlike the dime-a-dozen stimulant based weight loss products that often trigger high blood pressure, jittery feelings and sleeplessness, this new ingredient works through a mechanism weight loss researchers have not seen before.

According to Chief Researcher Ferguson, "This ingredient activates a protein in the body that helps it break down fatty acids. In simple terms this means you safely lose weight because your body is using food

as energy rather than storing calories as fat."

Recommended By Medical Doctors

Since so many weight loss products are untested and often times ineffective, medical doctors are usually hesitant to recommend them. OxiTrim is a rare exception.

Dr. Ahmad Alsayes says, "OxiTrim is a great option if you're looking to lose 15-35 lbs. The research behind it is incredible, and the fact that it's not based on stimulants means it's safer than most alternatives available."

"One of the absolute best things you can do to improve your blood pressure and cholesterol levels is lose weight," says Dr. M. Usman, M.D. "Regularly taking OxiTrim is a great way to make progress in all three."

And Dr. Ana Jovanovic noted, "If you're looking to shrink your gut, get rid of the pooch on top of your jeans and see visibly noticeable weight loss, it usually takes just 10-15 lbs. OxiTrim is a great choice for people who have struggled with these problems in the past."

How To Get OxiTrim

This is the official release of OxiTrim in Wisconsin. As such, the company is offering a special discounted supply to any dieter who calls within the next 48 hours.

A Regional Order Hotline has been set up for local readers to call. This gives everyone an equal chance to try OxiTrim.

Starting at 6:00 am today the order hotline will be open for 48 hours. All you have to do is call TOLL FREE **1-800-467-9816** and provide the operator with the special discount approval code: OTD16. The company will do the rest.

Current supplies of OxiTrim are limited, and callers that don't get through to the order hotline within the next 48 hours will have to wait until more inventory is produced. This could take as long as 6 six weeks.
