

# CareLink™ MobileHelp

CareLink™ MobileHelp is America's first and only medical alert system to work nationwide beyond the home with all the same features as traditional in-home systems.

The #1 question people ask when shopping for a Medical Alert System is...  
How far does the button work from my home?  
CareLink™ MobileHelp has the answer you're looking for... "Anywhere".

CareLink™ MobileHelp is a simple and affordable solution to many problems: Slip and fall accidents, medical emergencies including heart attack and stroke, security and fire concerns, and locating a loved-one... These are just some of the reasons why people rely on MobileHelp for peace-of-mind and rapid access to care. How can we help you?

Traditional Medical Alert System help buttons have a range of up to about 600 feet, and even that can be influenced by factors such as building construction. With CareLink™ MobileHelp, there's virtually no limit to your help button's range. CareLink™ MobileHelp is the Anywhere Help Button™. With CareLink™ MobileHelp, you can enjoy life to the fullest in your home and have the freedom to continue participating in the activities that you enjoy outside your home, knowing that you are always accompanied by a highly efficient medical alert system.

More than one third of adults 65 and older fall each year in the United States. With the potential for a fall to occur outside the home, CareLink™ MobileHelp keeps you connected to a live monitoring center regardless of your location\*.
