In the County of Dallas
State of Texas

This affidavit is in compliance with Texas Rules of Criminal Evidence, Rule 902(10b).

Case No. IFS-15-08018 in the matter of

Campbell, Wayne Lee, deceased.

Before me, the undersigned authority, personally appeared Rebecca Beshay, who being duly sworn, deposed as follows:

My name is Rebecca Beshay. I am over 21 years of age, of sound mind, capable of making this affidavit, and personally acquainted with the facts herein stated:

I am the Deputy Custodian of Records of the Dallas County Medical Examiner's Office. Attached hereto are 8 pages of records and xx photographs from the Dallas County Medical Examiner's Office. These said 8 pages of records and xx photographs are kept by the Dallas County Medical Examiner's Office in the regular course of business, and it was the regular course of business of the Dallas County Medical Examiner's Office for an employee or representative, or a doctor permitted to practice in the Dallas County Medical Examiner's Office, with personal knowledge of the act, event, condition, opinion or diagnosis, recorded to make the record or to transmit information thereof to be included in such record; and the record was made at or near the time or reasonably soon thereafter. The records attached hereto are the original or exact duplicates of the original.

Rebecca Beshay

SWORN TO AND SUBSCRIBED before me on July 29, 2015

Ruennette J. Ellis

Notary Public in and for Dallas County, Texas

My commission expires

(By statute, the original records are retained by the Dallas County Medical Examiner's Office. See Art. 49.25, Sec. 11, Vernon's Texas Statutes, CCP.)

Case: IFS-15-08018 - CC

Decedent: Campbell, Wayne Lee 43 years White Male DOB: 08/17/1971

Date of Death: 05/17/2015 (Actual)

Time of Death: 01:30 PM (Actual)

Examination Performed: 05/18/2015 07:45 AM

Body Weight: 213 lbs BMI: 33.36

Body Length: 67 in

ORGAN WEIGHTS:

Brain: 1,470 g	Right Lung: 760 g	Right Kidney: 150 g
Heart: 700 g	Left Lung: 430 g	Left Kidney: 160 g
Liver: 1,960 g	Spleen: 200 g	

This autopsy is performed at the request of W.H. Peterson, Justice of the Peace, Precinct 1, Place 2, McLennan County, Texas.

This case is related to cases IFS-15-08016, IFS-15-08017, IFS-15-08019, IFS-15-08020, IFS-15-08021, IFS-15-08022, IFS-15-08023, and IFS-15-08029.

EXTERNAL EXAMINATION

The decedent is received in a sealed body bag with tag #4885633. The body is unidentified at the time of autopsy. Photographs, fingerprints, palm prints, and radiographs of the head and chest are taken. The hands are bagged.

When first viewed, the body is clad in a black leather vest, black T-shirt, blue jeans, two brown boots, and four white socks. White metal rings are on the left second, left fourth, and right fourth fingers. Received with the body are a brown belt and a long-sleeved black shirt. Within the pockets of the jeans are seven quarters, six dimes, two nickels, and nine pennies. Within the pockets of the vest are five white metal, large-caliber, intact bullets. The clothing and bullets are submitted to the Criminal Investigation Laboratory, and all other items are released.

The body is that of a well-developed, obese white male who appears to be in his 40s. The body, as received, weighs 213 pounds and is 67 inches long. There is good preservation in the absence of embalming. The body is cold, rigor is fully developed, and there is well-developed, blanching posterior lividity.

Case: IFS-15-08018 - CC

Campbell, Wayne Lee

The scalp hair is short, brown and straight. A "soul patch" type goatee is on the face. An average amount of body hair is in a normal distribution. The irides are blue and covered by green colored contacts. The corneae are clear, and there are no petechiae of the bulbar or palpebral surfaces of the conjunctivae. The conjunctivae of the right eye are mildly congested. The ears, nose, and lips are unremarkable. The teeth are natural and in fair condition. The chest is symmetrical, and the abdomen is moderately protuberant with striae and an umbilical hernia. The external genitalia, anus and perineum are unremarkable. The penis is circumcised, and the testes are descended into the scrotum. The back is unremarkable.

IDENTIFYING MARKS AND SCARS

A 4 inch horizontal scar is on the lower right abdomen. Tattoos include a skull on a woman's body on the left arm, an illegible word on the left forearm, "BREAK THIS ONE" with a heart made of bricks on the left chest, a sword with barbed wire on the right arm, a fleur de leis on the right forearm, and "WAYNE AND BONNIE FAMILY TREE" with hands praying on the right chest.

IDENTIFICATION

The body is positively identified through fingerprint comparison.

EVIDENCE OF THERAPY

None is present.

EVIDENCE OF INJURY

I. Gunshot wound of the head into the trunk:

A gunshot entrance wound is on the right side of the chin, 8-3/8 inch from the top of the head and 1 inch right of midline. The 3/16 inch, slightly irregular defect has a 3/16 inch marginal abrasion, clockwise from 10 o'clock to 6 o'clock. A 1/8 inch laceration is at 7 o'clock. There is no soot or stippling on the skin.

After perforating the skin, the bullet tracks through subcutaneous tissue to exit the right submental chin, 9-1/4 inches from the top of the head and 2-1/2 inches right of midline. A 1 inch abrasion is on the skin in the path of the bullet, at 1 o'clock. The 1/4 x 3/16 inch defect has a marginal abrasion up to 1/4 inch, clockwise from 1 o'clock to 12 o'clock. A 1/4 inch, stretch-type laceration is at 8 o'clock.

The bullet reenters the skin of the anterior right side of the neck, 10 inches from the top of the head and 4 inches right of midline. The 1-1/2 x 1-1/8 inch, gaping defect has a 3/4 inch marginal abrasion, clockwise from 12 o'clock to 3 o'clock. Patchy, superficial, stretch-like lacerations extend 1 inch from the wound margin, clockwise from 4 o'clock to 9 o'clock. A 2-3/4 inch contusion extends clockwise from 7 o'clock to 9 o'clock.

After perforating the skin and subcutaneous tissue, the bullet fragments. Portions perforate skeletal muscles of the right neck, the right common carotid artery, and the esophagus. There are graze lacerations of the aortic arch.

Four small fragments of projectile are recovered from skeletal muscle of the right neck. A small-caliber, moderately-deformed, copper metal jacket is within the lumen of the esophagus. These fragments are collectively photographed, sealed within an appropriately labeled envelope, and submitted to the Criminal Investigation Laboratory.

Associated injuries include soft tissue and skeletal muscle hemorrhage of the right neck, hemorrhage within the deep skeletal muscle of the left side of the neck, intersitial hemorrhage within the upper lobes of both lungs, and 300 mL of liquid and clotted blood within the left pleural cavity. There are several fractures of the tracheal cartilage.

The predominant trajectory of the bullet is downward, front to back, and left to right, with some fragments traveling right to left upon entering the chest cavity.

II. Other injuries:

A 1-1/2 x 3/4 inch green-brown contusion is on the left flank. The left third fingernail is contused. Petechial hemorrhage is on the dorsum of the left foot. The right third toenail is contused.

These injuries, having been once described, will not be repeated.

EVIDENCE SUBMITTED

The following items are collected, sealed within appropriately-labeled containers, and submitted to the Criminal Investigation Laboratory:

- Bags from hands
- Clothing
- Blood standard
- Head hair standard
- Projectile fragments from trunk
- Five intact bullets recovered from clothing
- Gunshot residue kit
- Fingernail clippings.

INTERNAL EXAMINATION

BODY CAVITIES: See EVIDENCE OF INJURY. The thoracic and abdominal organs are in their normal anatomic positions. The right lung is tightly adherent to the chest wall. The left lung is moderately adherent to the chest wall.

HEAD: The scalp, subscalpular area, and skull are unremarkable. The dura and dural sinuses are unremarkable. There are no epidural, subdural or subarachnoid hemorrhages. The leptomeninges are thin and delicate. The cerebral hemispheres are symmetrical, with an unremarkable gyral pattern. The cranial nerves and blood vessels are unremarkable. Sections through the cerebral hemispheres, brainstem, and cerebellum are unremarkable. There are no hemorrhages in the deep white matter or the basal ganglia. The cerebral ventricles contain no blood. The spinal cord, as viewed from the cranial cavity, is unremarkable.

Case: IFS-15-08018 - CC

Campbell, Wayne Lee

NECK: See EVIDENCE OF INJURY. The hyoid bone and laryngeal cartilages are intact. The lumen of the larynx is not obstructed.

CARDIOVASCULAR SYSTEM: See EVIDENCE OF INJURY. A mild amount of atherosclerotic plaque is on the intimal surface of the abdominal aorta. The aorta and its major branches and the great veins are normally distributed. The pulmonary arteries contain no thromboemboli. The pericardium, epicardium, and endocardium are smooth, glistening, and unremarkable. There are no thrombi in the atria or ventricles. The foramen ovale is closed. The coronary arterial system is free of significant atherosclerosis. The atrial and ventricular septa are intact. The cardiac valves are unremarkable. The myocardium is dark red-brown and firm, and there are no focal abnormalities. The left ventricular thickness is 1.8 cm, the interventricular septum thickness is 2 cm, and the right ventricular thickness is 0.5 cm.

RESPIRATORY SYSTEM: See EVIDENCE OF INJURY. The upper airway is unobstructed. There are scattered petechiae of the epiglottis and larynx. The pleural surfaces are ragged, secondary to adhesions. The major bronchi are unremarkable.

HEPATOBIILIARY SYSTEM: The liver is covered by a smooth, glistening capsule. The parenchyma is dark red-brown and moderately congested. The gallbladder contains approximately 3 mL of yellow-green bile, with no calculi.

GASTROINTESTINAL SYSTEM: See EVIDENCE OF INJURY. The esophageal mucosa is gray and smooth. The stomach contains approximately 100 mL of partially digested food. There are no tablets or capsules. The gastric mucosa has normal rugal folds, and there are no ulcers. The small and large intestines are externally unremarkable. The appendix is present. The pancreas is unremarkable externally and upon sectioning.

GENITOURINARY SYSTEM: The capsules of both kidneys strip with ease to reveal smooth and slightly lobulated surfaces. The cortices are of normal thickness, with well-demarcated corticomedullary junctions. The calyces, pelves, and ureters are unremarkable. The urinary bladder contains approximately 200 mL of yellow urine. The mucosa is gray, smooth, and unremarkable. The prostate gland is unremarkable externally and upon sectioning.

ENDOCRINE SYSTEM: The thyroid and adrenal glands are unremarkable externally and upon sectioning.

LYMPHORETICULAR SYSTEM: The spleen is covered by a smooth, blue-gray, intact capsule. The parenchyma is dark red. The cervical, hilar, and peritoneal lymph nodes are unremarkable.

MUSCULOSKELETAL SYSTEM: The clavicles, ribs, sternum, pelvis, and vertebral column have no fractures. The diaphragm is intact.

TOXICOLOGY:

Evidence Submitted:

The following items were received by the Laboratory from Forensic Pathology:

- 006-006: Vitreous - red top tube
- 006: Biohazard Bag
- 006-004: Blood, femoral - gray top tube
- 006-001: Blood, femoral - gray top tube
- 006-002: Blood, femoral - gray top tube
- 006-008: Urine - red top tube
- 006-003: Blood, femoral - gray top tube
- 006-005: Blood, femoral - red top tube
- 006-007: Skeletal muscle - plastic tube

Blood, postmortem

Acid/Neutral Screen (GC/MS)

results reported in reflex assays

Alcohols/Acetone (GC)

ethanol: 0.122 g/100mL (Item# 006-003)

Alkaline Screen (GC/MS)

negative (Item# 006-003)

Salicylates (SPF)

salicylate: 108 mg/L (Item# 006-002)

Vitreous

Alcohols/Acetone (GC)

ethanol: 0.154 g/100mL (Item# 006-006)

FINDINGS:

- 1. Gunshot wound of the head into the trunk:
 - a. Entrance: right side of chin.
 - b. Exit: right submental chin.
 - c. Reentrance: right side of neck.
 - d. Injury: perforation of right common carotid artery, aortic arch, and esophagus; left hemoperitoneum; pulmonary contusions.
 - e. Recovery: fragments recovered from skeletal muscle of right neck; small-caliber jacket recovered from esophageal lumen.
 - f. Apparent range of fire: no soot or stippling on the skin.
 - g. Trajectory: downward, front to back, and left to right, with fragments traveling right to left within the chest cavity.
- 2. Hypertensive cardiovascular disease:
 - a. Cardiomegaly (700 grams).
 - b. Biventricular hypertrophy.
- 3. Pleural adhesions.
- 4. By history, the decedent was involved in a shoot out between rival biker gangs, with police involvement.
- 5. This case is related to cases IFS-15-08016, IFS-15-08017, IFS-15-08019, IFS-15-08020, IFS-15-08021, IFS-15-08022, IFS-15-08023, and IFS-15-08029.

CONCLUSIONS:

Based on the case history and autopsy findings, it is my opinion that Wayne Lee Campbell, a 43-year-old white male, died as a result of a gunshot wound of the head into the trunk.
