

# ROOT GROWTH & EARLY PLANT VIGOR

WITH PATENTED GLYPHOSATE SAFENING TECHNOLOGY

## MegaGro™ L

### WHAT IS MEGAGRO™ L?

- **MEGAGRO™ L** is designed as a specialty foliar and in-furrow PGR biostimulant that helps to increase the plant's metabolism and develop root structure and root hairs.
- With a patented, ideal ratio of phytohormones, IBA and Kinetin, **MEGAGRO™ L** helps establish a strong foundation with extended vigor for continued success through harvest.

**6.61 bu IN CORN**

**5 TO 1 ROI** WITH MEGAGRO IN THE POST HERBICIDE TANK-MIX

**1.7 bu IN SOYBEANS**

**3.5 TO 1 ROI** WITH MEGAGRO IN THE POST HERBICIDE TANK-MIX

## BOOST↑10™

**PROMOTES** PHOTOSYNTHESIS

**GENERATES** PLANT ENERGY

**KEY TOOL** FOR NUTRIENT USE EFFICIENCY

### BENEFITS:

- Improves plant metabolism, allowing it to adapt to environmental conditions, leading to a stronger stand, greater seedling vigor, and enhanced root development.
- Augments nutrient intake, allowing plants to better respond to abiotic stresses, and increases nutrient transport during peak demand.
- When applied in furrow, **BOOST 10™** helps with greater root mass in crops and early-season nodulization in soybeans.
- Foliar applications assist with photosynthesis efficiency and stress mitigation.
