

FULL CYCLE INNOVATION

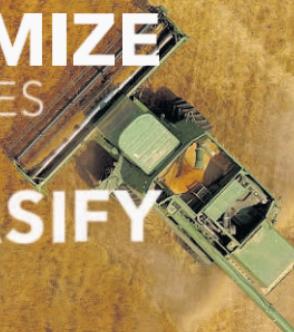

MAXIMIZE IDLE ACRES

DIVERSIFY REVENUE

BENEFIT SOIL HEALTH

Camelina is a proven crop solution for growers looking to maximize idle acres, diversify revenue, and meet the growing demand for advanced biofuels.

At VISION, we scale Camelina production through a fully integrated system, from genetics and seed production to grain aggregation and end markets. With a short growing season, low water and fertility requirements, and strong performance on marginal land, Camelina fits easily into existing rotations while supporting soil health.

VISION's JUMPSTART™ Herbicide Tolerant Camelina provides effective over-the-top glufosinate application, validated through wide-area commercial testing. This exclusive technology removes a key production challenge and gives growers added flexibility.

Backed by an assured market with Shell and supported by experienced agronomists, VISION helps growers reduce risk and capture new opportunity.

Limited grower agreements are still available.
