

Figure 3. Distribution of corn (left) and soybean (right) yield difference between algorithm-recommended (Agrooptimizer) cropping systems for maximum yield and UW-recommended systems (Typical) and the probability (P) as a percentage that the yield difference > 0 in the posterior sample distribution ($n = 4060$). Red dashed line shows zero yield difference and black dashed line shows the mean yield difference (Diff in the graph with 95% credible intervals).
