

Effect of feeding frequency on feeding pattern

**Increasing feeding frequency spreads out feed intake across the day
(more, smaller meals)**

Dairy herds that feed 2x/d:

- **Average 3.1 lbs/day greater dry matter intake** (Sova et al. 2013)
- **Average 4.4 lbs/day greater milk yield** (Sova et al. 2013)
- **Have greater milk fat synthesis** (Woolpert et al. 2017)
