[Redacted] PA

Good morning

New Jersey Natural Gas had a meeting last week with a [Redacted] PA etc. to discuss running our pipeline through the base. We proposed an alternate route after a possible change in route was suggested in a meeting with the Pinelands Commission. After our meeting last week, we decided to proceed with the alternate route as our best choice. We are at a very preliminary fact finding stage but intend to go out to bid for an Engineering Services contract shortly and would like to include line items for assistance to get an easement through the base. I plan on having our consultant help with the easement activities (if we get an approval once everything is reviewed). I was wondering if you could detail the easement process for me so I can make sure I include adequate work tasks in my statement of work to get you whatever info you require and get it in the correct format to make it useful for you. For instance, I am aware that the Corp of Engineers write the meets and bounds descriptions but we need to give an alignment to them to base their survey on. What format should this description take? Can we give a distance from center line of road (or off other physical landmarks) or do we need to give a survey alignment (coordinate points with specific degree change in direction).

Also, if there are any processes you need done on your side that we may be able to offer assistance, let me know. We would be our pleasure to help out wherever needed.

Thanks.

Regards,

[Redacted] PA
