

Your Hearing Is Vital

Another wonderful success story from National Hearing

Robert Adner has worn hearing aids for 40 years. Mr. Adner was introduced to National Hearing in September of 2024.

Due to a career in running a limestone crusher, using blasting caps and dynamite with no ear protection, he lost 100% of his

hearing in his left ear and his right ear was crippled by a 90% loss. That meant Robert did not qualify for a cochlear implant.

Mr. Adner went years wearing hearing aids that offered minimal improvement. He learned to read lips and got pretty good at it! Now, at 94 years old, as a final effort, he decided to give National Hearing a chance.

National Hearing ordered the newest technology, Intrigue AI products, for Robert to try. At this point, with his "dead ears," we figured what have we got to lose? Mr. Adner came back for a follow-up appointment 10 days after his original fitting and said, "I haven't heard this well

in 40 years," leaving both of us with tears in our eyes. We also added a mini microphone to his hearing arsenal giving Robert the ability to hear even better in certain environments.

My career has been so gratifying, seeing the amazing outcome that deaf or hearing-impaired clients are able to achieve when using Audibel products.
