

Alzheimer's Disease and Dementia ARE YOU AT RISK?

According to a new study by Johns Hopkins University School of Medicine and the National Institute on Aging, men and women with hearing loss are much more likely to develop dementia and Alzheimer's disease. People with severe hearing loss, the study reports, were 5 times more likely to develop dementia than those with normal hearing.

Have you noticed a change in your ability to remember?

"The more hearing loss you have, the greater the likelihood of developing dementia or Alzheimer's disease. Hearing aids could delay or prevent dementia by improving the patient's hearing."

-2011 Study by Johns Hopkins University School of Medicine and the National Institute of Aging

IS IT TIME FOR A HEARING TEST?

Hearing tests are always free. Hearing test is an audiometric test to determine proper amplification needs only. Hearing Aids do not restore natural hearing. Individual experiences will vary depending on severity of loss, accuracy of evaluation by our Consultant, proper fit, and the ability to adjust to amplification. Pursuant to terms of your purchase agreement, the aids must be returned within 30 days of completion of fitting in satisfactory condition for a full refund.
