

Oklahoma COVID-19 risk levels week to week

NEW NORMAL: Less than 1.43 daily new cases per 100,000 population — This New Normal (Green) risk phase means COVID-19 positive cases are presently at a manageable level in the community. While risk of infection is present, viral testing and containment measures can be used to monitor and control the virus.

LOW RISK: Between 1.43 and 14.39 daily new cases per 100,000 population — This Low (Yellow) risk phase means COVID-19 positive cases are present in the community at an increased level, and the risk of infection is elevated. Viral testing and containment measures are able to identify most cases from a known source.

MODERATE RISK: More than 14.39 daily new cases per 100,000 population — This Moderate (Orange) risk phase means many COVID-19 positive cases are present in the community with undetected cases likely. The risk of infection is heightened by community spread, and robust testing and containment measures are recommended to mitigate further spread.

HIGH RISK: More than 14.39 daily new cases per 100,000 population plus one of four additional gates triggered — OSDH will deem a county is in a high-rise phase if the county is reporting more than 14.39 daily new cases per 100,000 and one of more of four thresholds occur: less than 5% of ICU beds, surgery beds and ventilators are available and less than 5 days of personal protection equipment is available.
