

OKLAHOMA COVID-19 WEEKLY REPORT

Weekly Epidemiology and Surveillance Report
March 27 - April 2, 2022

We are concerned that there may be misunderstanding of last month's change to OSDH's weekly reporting of new COVID cases. The change, simply put, was to report cases based on the date the specimen was collected (i.e. the date that the patient was actually tested) rather than the date that the test result became available to OSDH (the report date).

Previously, the daily case count number reflected both old and new cases as they were reported by laboratories across the state. This made the number of cases reported each day dependent on factors beyond the control of OSDH (such as staffing issues at the source lab, or even weather) that may cause delays in getting the results to OSDH. While these outdated results are important to understanding community trends and the full pandemic picture, data show that reporting them as current results would be misleading to Oklahomans about the current state of the pandemic, which is the primary objective of the weekly reporting.

Even though we have made some changes in reporting, the older, delayed cases have not been lost. We continue to share the cumulative COVID case count in several places, and the delayed cases appear on the appropriate dates in those reports and charts. The cumulative case count is reported on the dashboard, in the weekly epi and surveillance report, in the situation update, and on OK2SHARE, as every case reported (timely or greatly delayed) is important.

Rest assured that we are accounting for all cases that are reported to OSDH, and that the 'new cases' category simply allows for more accurate tracking of current trends, while older, delayed results are not being lost, but presented instead on the appropriate date.
