APPLICATION SETTINGS

Step 1

.

Login and go to PageTracker.

Step 2

Click on the Application Settings cog and

select e-Edition segmenting Jobs. You must have administrator privileges to see the Application Settings.

Application settings		×
e-Edition segmenting	obs	E
🥔 Edit	🥔 Sa	ve 😢 Rese
Publication	Job id	
Salina-Journal (SJL)	63448	
Special Section (SPC)		
TV Week (TVW)		
Training (TRN)		

Step 3

Double-click a publication and enter the information. You will need the CMS job ID, the domain name, the webservice key and webservice secret and the site tag.

Step 4

Click OK to save your changes, and click Save on the panel.

ADDITIONS OR REQUIREMENTS

1: There must be a PageTracker section in the Output Preferences.xml file, located in a folder at tcms_indesign > (domain).local > Output > Preferences. 2: The final stage of the PageTracker workflow must contain: <includeCoordinates>true</includeCoordinates>. The include coordinates tag is often included in the basic output preferences, but it is commented out, similar to the example to the left. If the site then activates the Live e-Edition, the commenting xml tags should be removed.

3: The site's final page output for the CTP must include a nextMethod command sending the page through the final stage of the PageTracker workflow. For example, <nextMethod>Printed</nextMethod>

F the e-Edition is generated by TCMS Land nothing appears in the River of News, xml is not being generated. That can happen if stories are released when placed, or segmenting has not been turned on in within the CMS e-Edition settings.
