

Comprehensive Precision Testing for Longevity,
Cancer Risk, Metabolic Health,
and Body Composition — All in One Practice.

TAKE CONTROL OF YOUR HEALTH — BEFORE DISEASE TAKES CONTROL OF YOU

Advanced Precision Testing
Now Available
The future of medicine is no longer
reactive — it's predictive, preventive,
and personalized.

At Quantum HealthCare Services, we now offer a
comprehensive suite of cutting-edge diagnostic
technologies designed to help you detect risk early,
optimize performance, and extend your healthspan.

TruDiagnostic™ Epigenetic Testing

Measure Your Biological Age — Not Just Your Birth Date

Your chronological age is just a number. Your biological age reflects how your cells are actually aging.

TRUDIAGNOSTIC TESTING EVALUATES:

- DNA methylation patterns
 - Cellular aging speed
 - Inflammation burden
 - Immune resilience
 - Track whether your lifestyle is aging you faster — or slowing aging down
 - Identify areas to optimize
 - Monitor the effectiveness of your health plan over time
- Know your aging trajectory. Change it.

Toolbox Genomics® Testing

Your DNA Blueprint for Disease Prevention

Your genes influence your risk for:

- Heart disease
- Diabetes
- Dementia
- Autoimmune conditions
- Obesity
- Medication metabolism

This advanced genomic panel helps us:

- Identify inherited risk early
- Personalize nutrition and supplement strategies
- Optimize medication selection
- Create a prevention-focused care plan

Your DNA is not your destiny — but it is your instruction manual.

GB Longevity Testing

Proactive Aging & Preventive Health Strategy

Longevity testing combines:

- Advanced biomarkers
- Inflammatory markers
- Metabolic risk profiling
- Hormonal optimization metrics

We identify:

- Early cardiovascular risk
- Metabolic dysfunction
- Hidden inflammation
- Hormonal imbalances

Extend not just lifespan — but healthspan.

Exact Sciences® CancerGuard™

Multi-Cancer Early Detection Blood Test

Cancer is most treatable when found early.

CancerGuard testing screens for multiple cancer signals

in a simple blood draw — before symptoms appear.

- Early detection
- Non-invasive
- Peace of mind

For individuals with:

- Family history of cancer
- Age-related cancer risk
- Desire for proactive screening

Early knowledge saves lives.

Who Should Consider Advanced Precision Testing?

- Adults 30+ focused on prevention
- Individuals with family history of chronic disease
- High performers & athletes
- Those struggling with weight or metabolic health
- Anyone who wants to optimize longevity

The Future of Healthcare Is Preventive

Don't wait for:

- Abnormal labs
- A diagnosis
- A health scare

Proactive testing allows early intervention — when it matters most.

FREE HUME BODY POD A \$300 VALUE WITH COMPLETED TESTING.

- Body fat percentage
- Muscle mass
- Skeletal mass
- Intracellular body water
- Extracellular body water
- Health Score

- Continuous physiological monitoring

Collects health data throughout the day and night, rather than relying on intermittent measurements.

- Metabolic and recovery-focused design

Emphasizes signals tied to stress, recovery, and energy regulation instead of exercise metrics alone.

- Advanced optical and sensor-based measurements

Uses onboard sensors to track changes in cardiovascular and autonomic nervous system activity.

- Designed for trend accuracy, not single readings

Optimized to detect meaningful changes over time rather than isolated daily fluctuations.
