

NOTICE TO TYRONE BOROUGH SEWER CUSTOMERS

During the spring and summer, the Tyrone Borough Sewer Department will be performing preventative maintenance on all public sewer mains throughout town. This preventative maintenance program involves high pressure flushing and vacuuming all debris from the main trunk sewer lines. If you have experienced problems during this flushing process in the past, it is most likely caused by not having a proper vent within your lateral (line from house to main line). According to Borough Code, all sewer connections are to have a vent, trap and cleanout installed within this lateral.

If you have experienced problems in the past, it would be beneficial to have a trap, vent and cleanout installed within your lateral connections. The projected area of this flushing is as follows: Belmont Avenue, Cameron Avenue to Bald Eagle Avenue and Riverside Avenue and 10th Street to 16th Street.

The area of flushing is subject to change without notification.

Jason Harris, Superintendent
Tyrone Borough Sewer Department
