BOISE STATE UNIVERSITY
ANDRUS CENTER FOR PUBLIC POLICY

In April of 2019 the Andrus Center for Public Policy convened the groundbreaking conference- **Salmon, Energy, Agriculture, and Community: Can We Come Together?** The conference was designed to encourage discussion and action towards a long-term plan for solving the Pacific Northwest's two interconnected crises - reliable energy systems and the continuing decline towards extinction of the wild salmon population.

On Thursday, May 13, the Andrus Center will host a two-year check-in virtual event to consider where we are now and how to keep progress moving. As in 2019, this online gathering will include diverse voices reflecting key stakeholders across the region. Some are responding creatively, some are holding long-held positions, and some have yet to join the conversation as our region's history is written. The conference will be followed by a summary report.
