

# Outwintering Cattle to Reduce Costs and Improve Crop Yields

The Wallace Center Pasture Project host discussion and demonstration of the value in outwintering cattle on crop fields. Using cattle to distribute nutrients into the crop field over the winter improves soil quality without the need for application of nutrients. It also reduces input cost and nutrient runoff associated with mechanical application of fertilizer.

## Main topics will include:

- Yield Improvement Case Studies
- Financial Benefits
- Improvements in Soil Health and Water Quality

For more information or to RSVP,  
please contact John Delaney at
