

2 OUT OF 3 PEOPLE OVER 75 SUFFER FROM HEARING LOSS

Untreated Hearing Loss & Dementia DID YOU KNOW??

John Hopkins Medical Institution found that adults with hearing loss are more likely by 61% to develop dementia. Furthermore, they found that as the severity of the hearing loss increased, so did the risk of dementia.

Mild
untreated loss

2x
More likely

Moderate
untreated loss

3x
More likely

Severe
untreated loss

5x
More likely

On a more positive note, doctors have found that hearing aids improve brain function in people with hearing loss after only 2 weeks of aid use. Patients exhibited a significant improvement in their cognitive function with hearing aid use. **Hearing aids improve memory AND speech.** Your hearing health and hearing devices change over time and require regular attention. Hearing loss does not have to affect your quality of life or your brain health... and we can help!

Hearing Aids available for all budgets
