**SCC 100 to 135,000**

“We try to do things right and get better. After starting fresh cows on Udder Comfort™ 2 years ago, I was impressed with our improved SCC and production. I’m sold on this even before the pre-fresh trial,” says Bob Keefeer, milking 700 cows at Hard Earned Acres, Shippensburg, Pa.

Bob alternated months for groups of heifers to get Udder Comfort mostly before they calved, 1x/day 5 to 7 days pre-fresh and 2x/day 1 to 2 days post-fresh. “We averaged more milk across groups getting it pre-fresh, and I could see the benefits when I lined them up every Friday.

“But what impressed me is we had zero mastitis in groups getting Udder Comfort pre-fresh, and treated 5 cases in groups that did not,” Bob reports. “That’s big. We’ll keep using Udder Comfort on the pre-fresh and include the mature cows.”
