

TRUST IN SMARTSTAX® TECHNOLOGY YIELDS PEACE OF MIND

Dean Werries doesn't remember a time when there could be very little crop to harvest in a corn field. Since returning home to the Chapin, Illinois, family farm, SmartStax® technology has supported the performance and standability of the Werries' corn crop.

"I don't remember a really bad scenario where we didn't even pick the crop like my Dad said he has," Werries said. "With SmartStax, we can trust that we'll have good standing corn."

SmartStax technology protects corn roots from the Billion Dollar Bug: corn rootworm. Two built-in modes of action help provide for maximum control of corn rootworm and the assurance of knowing your crop and yield potential are protected all season long.

"We're getting really good yields," Werries said. "We've had some challenging weather the last two or three years, and we're just amazed at what we're still yielding."

SmartStax® RIB Complete® corn blend has the broadest spectrum of insect control on the market — with Roundup Ready® 2 Technology and LibertyLink® herbicide tolerance for broad-spectrum weed control.

"We've really learned to trust the SmartStax technology. It's working for us," Werries said.
