

***S.D. Ellenbecker! Specializing in all type of concrete construction, including a variety of dairy industry and agricultural structures***

***Cost effective...*** All-metal construction requires fewer posts and columns. A standard all-metal barn would contain four columns instead of six found in most wood barns.

***Durable, safer materials...*** Structures are far less susceptible to fire since no wood is used in the construction process. Buildings are more resistant to natural elements than wooden counterparts.

***Innovative construction methods...***

Ellenbecker is one of the first to introduce an all-metal frame method of agricultural construction to the area.

***The concrete experts...***

- Barn additions
- Barn remodeling projects
- Concrete cow yards
- Dairy complexes and structures
- Free-stall and standard barns
- Manure storage facilities
- Milking parlors
- Water reservoirs
