

Profit much more with Immu-Pro

**Relieve heat stress, lower SCC, improve
quality milk production & preg.rate**

"In summer, it is often 90°F and up and humid here. Our 300 cow conventional herd was around 300 SCC and that got us penalties. We tried everything -- teat dips, udder lotions and sprays, vaccines and other feed additives. Finally, we saw the ads and good results and we called some of these dairymen and got on Immu-Pro and some of their other products. We are very satisfied. SCC dropped much, less mastitis, and good feed intake. Our organic herd also dropped 40% on SCC. Immu-Pro and companion products work faster than anything we have ever used."

Greg Amos, Amos Bros., Santa Rosa, CA
