

I live my  
life in  
90 minute  
chunks

Overactive bladder (OAB) can be incredibly distressing. But different age groups react in different ways to medications. So it's important to find out what medications work best for who and why. For example, the PILLAR clinical study will look at how a medication approved to treat OAB symptoms affects people with OAB who are greater or equal to 65 years old. Study-related medications will be provided free of charge. Contact our understanding study team today for a confidential, no-obligation chat.
