# Edmunds hits the road with TESLA'S MODEL 3

DAN EDMUNDS  
*Edmunds*

The Model 3 is Tesla's most affordable electric car, with a promised starting price of \$35,000. Hundreds of thousands of Americans have put down a \$1,000 deposit for one. Almost all of them are still waiting for the chance to order.

At Edmunds, however, we've purchased and taken delivery of one of the first Model 3s out. And we've driven it more than 3,000 miles so far.

It's not our first Tesla; we've previously bought and conducted 18-month tests of the Model S sedan and the Model X SUV. We've sampled most other electric vehicles on the market, too. Here's what we can say so far about living with our Tesla Model 3 sedan:

## SERVICE AND QUALITY: A WORK IN PROCESS

We're going to get this out of the way first: Tesla's scramble to increase its Model 3 production seems to have adversely affected Model 3 build quality, at least on the basis of our tiny sample of one. Body panel gaps are inconsistent, reflecting a lack of attention to detail, and

this applies not only to our own car but even to Model 3s we've seen on display.

After we brought ours home, we discovered it also had a cracked vanity mirror and a broken driver's seat shell. In our first six weeks, we've had to do the equivalent of a Windows PC's Ctrl-Alt-Del reboot of the all-important touchscreen about a dozen times.

We've called a Tesla service center about the problems but have had difficulty getting an appointment. Drive-ups were not welcome, so our parts were ordered based on photographs alone. Weeks later, we're still waiting for word and it's hard to get answers.

## YOU BETTER LIKE TOUCHSCREENS

The Model 3's minimalist interior is dominated by its huge central touchscreen. There are no gauges, no knobs and no switches except for door-mounted window controls. It looks clean and futuristic, but ease of use isn't as stellar.

Certain controls are accessed from a couple of multi-axis roller buttons on the steering wheel. For just about everything else, you'll be

reaching for the touchscreen to access wiper controls, adjust cruise control speed, and even to switch between modes on the audio system. You get used to it, but this approach increases the chances of driver distraction.

The Model 3 doesn't play well with smartphones either. It lacks Apple CarPlay and Android Auto, two systems that easily integrate many of your phone's apps with the vehicle. And its USB ports cannot deliver any music, audiobook or podcast files from your phone to the audio system. The only way to listen to your media files is to stream them using Bluetooth audio.

## DRIVES GREAT, RANGE IS APPEALING

Those issues aside, we enjoy driving the Model 3. It feels sorted and sporty when you're driving around turns, and the electric motor delivers plenty of thrust. It's dramatically quicker and more engaging to drive than other popular EVs such as the BMW i3 and the Chevrolet Bolt. That premium feel experienced in the Model S and the Model X is also present.

Currently, Tesla is only

**EDMUNDS SAYS:**  
Tesla does things differently, which is both a strength and a weakness. The new Model 3 sets a new standard for what an affordable electric vehicle can be. But initial problems highlight Tesla's inexperience with mass-market production.

building rear-wheel-drive Model 3 sedans with the expensive 310-mile long-range battery. The smaller battery and its purported 220-mile range and \$35,000 price are still some months away. Edmunds paid \$56,000 for its fully loaded Model 3.

At first, we were ready to conclude it's not worth paying more for the big battery. In a regular gasoline car, 300 miles feels like a minimum because no one likes to stop for gas often. By contrast, you can charge an electric car at home every night, and at that point 220 miles is more than enough for daily use.

But there are reasons to go big. Of course, it's an advantage for those who drive farther than average or can't charge

every day. But it also has to do with charging speed at Tesla's network of Superchargers. If you've got a Model 3 with the bigger battery, you won't need to spend as much time hooked up to a Supercharger station. Because charge rates slow down as batteries get closer to full, it actually takes less time to bring a 310-mile battery up to 200 miles of range — which is likely all you'll need to get to the next station — than doing the same with the smaller 220-mile battery. The difference could amount to 15 minutes or more per stop, which could really add up during an extended road trip.

# 5 DRIVING TIPS

## Every Teen Driver Needs to Know

But a teenager's lack of behind-the-wheel experience puts them at greater risk of getting into an accident. Add factors like passengers, loud music and stress, and the situation can quickly turn dire. Motor vehicle crashes are the leading cause of death for U.S. teens, with one in three teen deaths caused by vehicle crashes, according to the Centers for Disease Control and Prevention (CDC).

To help teens navigate into this new responsibility safely, there are lots of resources out there to help them. For example, Boys & Girls Clubs of America and The UPS Foundation have come together to create the UPS Road Code program, which is available in 57 Boys & Girls Clubs across 46 U.S. cities. This is a free program that educates teens on safe driving principles and best practices for road safety.

Taught by UPS employees who volunteer their time,

the program offers classroom instruction along with practice time behind the wheel of a virtual driving simulator. The UPS instructors share insights they have learned through the company's in-depth defensive driving training.

"The thing that has really hit home for me is the fact that driving a car is a huge responsibility," said CeCe McNeal, the national teen ambassador, east region, for the UPS Road Code program.

The program's national teen ambassador, west region, Jaylen Vinson added, "Whenever I get into the car, before I turn the key, I remind myself that I'm in control of the car and I'm in charge of the choices I make on the road."

Whether you have a teen in your life who needs some guidance, or you would like some reminders of how to be more mindful while on the road, here are some tips and insights that McNeal and Vinson learned during the

course that can help drivers of all ages avoid risky behavior on the road.

### Delete Distractions

If your attention is on something other than driving — texting, eating, turning the radio dial, talking to a passenger or on the phone — you're putting yourself at greater risk of getting into a crash. And with every crash, you also risk the lives of your fellow passengers and everyone else out on the road.

### Mind the Speed

Sometimes we don't pay attention to the speed limit, which can lead to harmful consequences very fast. Increased speed can result in an expensive traffic ticket, along with raised insurance rates. But, most importantly, speeding reduces your time to react to hazards and increases your likelihood of getting into a dangerous collision.

### Plan for the Weather

Get into the habit of

checking the weather before you plan your trip. Driving in heavy rain, snow and ice can be stressful and slippery for any driver. So, when the conditions are bad and you have to head out, give yourself extra time. And if you're still running behind schedule, just remember, it's always better to be late than end up in a serious crash because you are rushing.

### Never Drive While Impaired

Alcohol and other substances can impair your vision and

reaction time, which can lead to a greater likelihood of being in a fatal crash. In fact, in 2016 there were 10,497 people in the United States killed in alcohol-impaired driving crashes and an average of one alcohol-impaired driving fatality happens every 50 minutes, according to the National Highway Traffic Safety Administration. Driving under the influence is never worth the risk.

### Look and Think Ahead

One key to being a good

Offer effective on eligible and qualified units purchased from a participating Sheffield dealer. Offer subject to change without notice. (\* E = means estimate) All SnowCheck offers are valid at participating Polaris dealers only. See your local dealer for details. Offers are valid on MY19 SnowCheck orders placed between 3/05/18 - 4/17/18. Consumer must take delivery between 8/1/2018 - 12/31/18 to qualify. Professional rider on a closed course. Polaris® recommends that all snowmobile riders take a training course. Do not attempt maneuvers beyond your capability. Always wear a helmet and other safety apparel. Never drink and ride. ©2018 Polaris Industries Inc. - 11/30/17.

# Teen Driver

Cont. from Pg. 8

driver is staying focused on the road and what's around you, so you can spot the hazards and respond to them immediately. Be aware of others sharing the road with you, including bicyclists and pedestrians, and leave enough space between you and the other cars to allow for reaction time. Scan the road ahead, especially intersections, while also remembering to check those rear and side-view mirrors regularly.

"If you don't handle your car in a safe manner at all times, it can turn into a deadly weapon against others on the road, your passengers and yourself," McNeal said. "Keeping these tips top of mind before getting behind the wheel can reduce the risks faced on the road and help to make the roads safer for us all."

# INSPECT

## belts and hoses

The impact belts and hoses can have on your vehicle’s performance might surprise you. Belts play a key role in operating every part under the hood with a pulley, and hoses keep the cooling system running.

With spring’s arrival, be sure the rubber in your engine compartment is in good working order to avoid becoming stranded. Warmer temperatures create under-the-hood conditions that can aggressively deteriorate older belts and hoses.

### Role of Cooling-System Hoses

If you have ever looked in your engine compartment,

you likely have seen a maze of hoses, but do you know what they do?

Some are there to transport fuel, air-conditioning refrigerant and even air to vacuum-controlled components, such as a cruise-control actuator. Your vehicle’s cooling system also relies on hoses to carry important coolant to regulate engine temperatures. When an engine overheats, it causes immense damage to its internal parts.

Early detection of a failing cooling-system hose can save you big bucks in repairs as well as keep the wheels turning during a spring vacation.

Here are some signs you’ll

notice when your hoses start wearing down, as reported by the American Automobile Association:

- Visible fluid leakage under your car. It’s a good idea to know what kind of coolant your vehicle operates with, so you’ll know which colors to look for.
- A sweet burning smell can often indicate a coolant leak is present.
- Visible steam or smoke from beneath the hood.

Hoses take a lot of abuse, often being exposed to drastic temperature changes that may cause swelling, cracking or bulging. Regular inspections can give you the advantage in

catching a problem before it requires an expensive repair.

### Understanding Belts

Most of today’s passenger vehicles rely on a single belt to power important components, such as the alternator, AC compressor and even power steering. They are called serpentine belts, and they feature ribs that ride on the pulleys to operate each part.

The AAA suggests signs of a failing belt can include:

- A squealing noise as the engine accelerates;
- A whirring or grinding noise from a pulley while engine is on; and
- A slow, rhythmic slapping sound at idle.

Noticing cracks or noises coming from your belt usually means a replacement is necessary. Most vehicles feature a diagram for the correct routing position.

Changing a belt can be accomplished without the need for special tools, but may be better left to professionals unless you feel comfortable doing the repair.

Don’t find yourself stranded this spring. Make sure the rubber in your engine compartment is ready for the warm weather.

# TEST YOUR AIR CONDITIONER

It can be easy to forget about your air conditioning system during the winter.

As the weather begins to warm with spring, it is a good idea to have these components inspected by a professional.

For most regions, spring means a break between bitter cold and blazing hot temperatures. Take advantage of the moderate conditions to ensure your vehicle's air conditioning is in good

working order before the summer heat makes its appearance.

## Beat the Heat

It is in your best interest to address A/C issues while the weather is comfortable. This type of repair is typically expensive as it requires several new components and an in-depth labor process.

Realizing you have a problem while the weather is cool,

allows you to implement a savings plan to cover the cost. Don't get caught with a busted A/C system at the height of summer.

## What Goes Wrong

When you notice the vents in your vehicle are blowing warm air, it usually means there is an issue with the AC compressor. This component is the heart of your air conditioning system. It's in charge of heating and

pressurizing refrigerant before it makes its way through a cooling process.

These are the other components responsible for keeping you cool on hot days:

**Condenser:** Once the refrigerant is pressurized and heated, it makes its way through a condenser, where it loses its heat.

**Filter drier:** This important part of the system, cleans out impurities and contaminants

the refrigerant may have picked up on its path.

**Expansion valve or orifice tube:** Vehicles rely on either of these components to strip refrigerant of pressure once it has been purified.

**Evaporator:** The final step of the process happens inside the dashboard. This vital part ensures the air from the vent is cooled and moisture free.

There are also lines, blowers, resistors and duct work required to be in good working order to ensure your A/C system works properly.

## Getting the Repair

Repairing a vehicle's air conditioning system is much more involved than replacing the air compressor. In fact, most manufacturers won't even offer a warranty unless the parts listed above are replaced.

When your qualified service center suggests replacing the entire system, it's likely not them trying to upsell.

Even though the compressor may be the only part that isn't working, each component must be replaced to ensure it is free from debris that will ultimately ruin the heart of your air-conditioning system.

## Get on track with

# MAINTENANCE

Now that spring is arriving, it's a good time to get back in control of the health of your vehicle.

Regular maintenance is required for your vehicle to operate efficiently and safely. Just like we require scheduled visits to the doctor, a mechanic can discover and resolve problems your car might be experiencing before they become serious.

### Commonly Ignored Maintenance

When forgetting or ignoring the general service your vehicle requires, you could be greatly reducing its longevity. A survey conducted by the Car Care Council showed statistics of common problems cars experience when service goes ignored. **They include:**

- 25 percent of cars had low or dirty engine oil.
- 17 percent had inadequate cooling protection or low coolant levels.
- 16 percent required new

wiper blades, while 27 percent had low or dirty washer fluid.

- Overall, 89 percent of vehicles needed at least one repair or service.

Operating your vehicle without proper maintenance can put great stress on the important components that make it run efficiently. Schedule an appointment

with a professional to create a dedicated service schedule based on your vehicle's specifications.

### Importance of Fluid Levels

Your vehicle requires several fluids to keep different parts running as they were intended. You're probably most familiar with engine oil, as it is part of routine maintenance.

During an oil change, it is common practice for a mechanic to top off other fluids that assist power steering, braking and cooling.

Another hard-working part of a vehicle requires proper fluid levels: the transmission.

An automatic transmission depends on fluid to lubricate and serve as coolant for the intricate components that

make a transmission operate.

Since general service dates can differ from manufacturers, it's important to check your owner's manual and find their recommendations.

To check your fluid for capacity and signs of deterioration (dark in color, burned smell) you can follow these steps for most automatic transmissions.

1. Park vehicle on a level surface with the engine running.
2. Locate the transmission dipstick and remove it from the tube. Wipe it clean and reinsert.
3. Now remove it again and observe the indicator markings on the end of the tube.
4. If low, you can fill it in the same tube that holds the dipstick.

If your capacities are at low levels, be sure to have a qualified mechanic find out why. There may be a leaking seal that needs replaced.
