#1 Spine Care AND #1 Pain Management

SPINE CARE
As “interventional spine specialists,” we treat spinal conditions such as disc herniations, spinal stenosis, sciatica, spinal arthritis etc. but we also treat pain from head-to-toe. This means we treat patients for pain that may be caused by a neurologic issue, disc damage, joint arthritis, age related degeneration, headaches, failed surgery, or injury, etc.

Our patients know that we don’t just look at their scans or their symptom list when we diagnose. Each patient has an individual set of circumstances and experiences that contribute to their pain. Our physicians focus on the whole patient to determine the source and cause of their pain and do so from a caring human perspective. This is one of the reasons that so many of our patients refer their friends and family to us.

Accurately diagnosing the cause of a patient’s pain is at the beginning of our treatment plan. We recognize that every patient presents with a unique medical history and symptoms. A precise diagnosis requires a thorough review of the patient’s history, symptoms, physical examination, and diagnostic tests like MRI scans. Once we determine the cause of the pain, we develop a strategy for creating an effective individual treatment plan for the patient. Everyone on Team M.I.S.S., including 5 board-certified physicians, 3 board-certified nurse practitioners, compassionate medical assistants and nurses, and our professional office staff, is dedicated to the highest standard of care for all of our patients.

PAIN MANAGEMENT
At Midwest Interventional Spine Specialists, M.I.S.S., we are humbled by the work we do to help our patients to conquer chronic pain and live healthier lives. When we identify an effective treatment to help diminish a patient’s pain, we know that the resulting pain relief can have a profound impact on that patient’s quality of life. That’s what drives our efforts to provide leading-edge and cutting-edge treatments for pain.

We emphasize the importance of wellness and living a healthy life. Everyone in the world wants to feel healthy, and feel vibrant, have energy, be successful and we help them towards these goals. When we’re not taking care of our body, and we suffer from pain, it creates a massive breakdown that is physically, mentally, and emotionally harmful. How it affects our relationships, our finances, every aspect of our lives, can be devastating.

We don’t want people to underestimate how serious the impact of chronic pain can be. We don’t want our patients to miss out on the beautiful vibrancy and energy of their lives because they are stuck in unconscious patterns until the day they wake up and it’s too late or they have to backpedal and fix things. We just want to make it a simple part of life to feel amazing. And we do this by having a caring attitude towards our patients like we would a family member and we encourage them to adjust their lives and we help them through various strategies to have the energy, vitality, and health that they deserve so that they can achieve all that they want in their relationships, their work, and their life.

Medical innovation is at the core of what we do to give our patients effective pain relief. Our practice has been the FIRST to offer many new, innovative, and evidence-based treatments for pain in Northwest Indiana. We are excited about the many minimally invasive treatment options we can offer to help our patients find effective relief of their pain. M.I.S.S. is a leader in introducing the most advanced techniques and state-of-the-art technology for the treatment and management of chronic pain.

For many, the results can be life changing.
