Studies show new pill relieves joint pain in 7 days without costly injections. Approved by top doctors nationwide. Relieves joint stiffness. Increases joint mobility and freedom.

M. emore than 40 million Americans suffering from chronic joint pain are set to benefit from a newly patented breakthrough in joint pain called FlexJointPlus.

Scientists have uncovered a way to tackle the most common cause of chronic pain in the country in what has been killed the first blackletter since the discovery of penicillin.

This new needle-less breakthrough has the potential to delay or eliminate the need for 175,000 joint pain injections annually.

Patients who have tried the patented new FlexJointPlus have reported a huge reduction in pain and in a new on line survey, 97% said they would take FlexJointPlus again.

Sufferers currently rely on prescription drugs or costly injections, which can cause severe gastric irritation over time, like many patients have experienced greater than 50% reduction in pain and stiffness at 60 days.

They also reported an improvement in stiffness when first getting out of the bed in the morning, and an improvement in pain whilst doing light household chores.

With these studies medical doctors and researchers at various sites have found the ingredients in FlexJointPlus are clinically effective at reducing pain and stiffness associated with joint pain and stiff joints, especially osteoarthritis.

The findings are especially impressive, but results will vary.

By August the company was no longer able to make FlexJointPlus available to all patients.

IMPRESSIVE BENEFITS FOR JOINT PAIN SUFFERERS

A medical study was carried out by senior Paul Sansbury, a leading orthopedic consultant, and published in the Journal of Arthritis in July 2014.

The study involved patients with a variety of joint pain conditions associated with arthritis. The results were remarkable.

One of my patients taking FlexJointPlus has been able to cut his cane in two.

His left hip joint was so stiff and painful I had to use a wheelchair. I can now walk with a walking stick and am now able to get a good-night’s rest again.

With so much positive feedback, it’s easy to see why sales for this new approved joint pill jumped to 73,000 per day.
