

Japan's Top Joint Pain Pill for 75 Years is Now Available in the US

Approved by doctors nationwide, the breakthrough ingredient relieves joint stiffness, pain, and increases mobility without the side effects of most pain relievers

*Chris Peterson,
Special Health Investigator*

Doctors and patients are rejoicing after hearing the news that Japan's top pain reliever is now available in the US.

This pill has been used safely in Japan for over 75 years, and the active ingredient can soothe painful inflammation and stiff joints that so many older Americans are suffering from today.

It also works to rebuild your cartilage and joint material that naturally degrades over time.

The pills cost significantly less than other, less-effective drugs as well, which is critical in this era of skyrocketing health care costs. Some patients reported their pain management costs have been reduced by 87%.

The specially formulated pill is now being offered on a trial basis in the United States under the brand name Proflexoral™.

Eases Pain In Minutes

Patients are ecstatic for this incredible joint pain-reliever because it can ease pain in as little as 15 minutes and steadily improves mobility and relieves stiffness over the first 24 hours.

The active ingredient comes from a natural source that has been proven to reduce painful inflammation. There have been no major side effects in the history of this ingredient.

"I felt relief almost immediately in my knees and it just got better from there. I can finally use my hands again. I never go a day without it now. I sleep a lot better too since I don't wake up stiff and sore in the middle of the night. I recommend Proflexoral™ to all my friends now," says Don Miller of Ohio.

Reverses Joint Destruction

Proflexoral™ contains an incredible compound with the proven ability to rebuild damaged cartilage and soothe painful inflammation in joints and muscles.

This compound is not a drug and has been used for centuries for medicinal purposes. Until now, this amazing ingredient has not been available in the US.

Patient studies have reported no adverse side effects. Many NSAIDs and over the counter pain relievers can damage the stomach lining and kidneys.

Many patients report that they now enjoy their work and hobbies again thanks to Proflexoral™.

Doctors are recommending this healing compound that has been scientifically proven to heal joints and ease pain.

"My hands were so painful. I thought I would just have to live with the pain. Nothing else helped, I tried everything. And I was really worried about getting addicted to painkillers. Proflexoral™ is the first thing that has worked in a long long time. And it started working within an hour. Now I work in my garden again and knit clothes for my granddaughter," Marjorie Taylor of Texas reports.

Sales for Proflexoral™ have skyrocketed in the last few weeks and the company can barely keep up with orders.

Studies Show Incredible Improvement in Joint Health

Landmark studies have proven the effectiveness of this life-changing ingredient in recent years.

In one study, 15 patients suffering from knee pain were given this compound, and 15 were given a placebo for 8 weeks.

All patients receiving this powerful compound reported decreased knee pain, better flexibility, and every single one was able to increase their walking distance.

In another trial, 66 people suffering from stiffness and pain were either given a popular prescription drug or this natural ingredient. Then detailed measurements were taken for pain, degree of mobility and the ability to do common household chores.

This healing compound outperformed the popular prescription drug by 47% and users experienced no adverse side effects. The prescription drug takers often reported upset stomach and discomfort using the bathroom.

Plus the study showed that the people that took this compound experienced no decline of cartilage during the trial, which means that this shocking ingredient was actually stopping the aging process in their joints.

And patients even had less pain and stiffness a full

month after they stopped taking the active ingredient in Proflexoral™. The effects of the compound are so powerful they keep working even when you're not taking it.

It comes as no surprise that the makers of Proflexoral™ can barely keep it on shelves.

How This Breakthrough Compound Works

Researchers have recently discovered that as we age, our body produces enzymes that naturally increase inflammation and eat away at cartilage and joint material.

This causes chronic pain as the joint slowly degrades and becomes inflamed.

The compound that can reverse this process is commonly known as BSE.

"This special compound acts like a fire hose for burning inflammation in the body, which causes most of the pain you feel. It works by inhibiting the enzymes that cause inflammation," says Dr. Ralph La Guardia, a physician in Connecticut who specializes in geriatric care and pain management.

"It also works by replacing the joint material that naturally degrades with age with new, healthy material that allows your joints to essentially 'rewind the age clock'."

Dr. La Guardia has begun recommending Proflexoral™ to his patients and has seen the incredible results time and time again.

How To Get Proflexoral™ At A Discounted Price

This is the official release of Proflexoral™ in Illinois. So the company is offering a special discount supply to any person who calls within the next 48 hours.

A regional order hotline has been set up for local readers to call. This gives everyone an equal chance to try Proflexoral™.

Starting at 7:00am today the order hotline will be open for 48 hours. All you have to do is call TOLL FREE 1-800-980-9643. The company will do the rest.

Important: Due to Proflexoral's recent media exposure on ABC, CBS and FOX NEWS, phone lines are often busy. If you call and do not immediately get through, please be patient and call back. Those who miss the 48-hour special discount must pay more for Proflexoral™, and may have to wait for more to be produced.
