Exhibit H Notification List

Exhibit I Copies of Notifications

I. INTRODUCTION AND SUMMARY OF THE APPLICATION

1. Wolf Carbon Solutions US LLC (“WCSUS”) hereby petitions the Illinois Commerce Commission for the issuance to it of a Certificate of Authority pursuant to the Carbon Dioxide Transportation and Sequestration Act (“CO2 Act”) (220 ILCS 75/1 et seq.) authorizing WCSUS to design, construct, and operate the Illinois pipeline portion of the Mt. Simon Hub. The “Mt. Simon Hub” (“MSH”), as used herein, is a state-of-the-art CO2 capture, pipeline, and sequestration system that will safely capture and transport CO2 from ethanol facilities in Cedar Rapids and Clinton, Iowa, to a storage facility in the Mt. Simon geological formation near Decatur, Illinois, as depicted in **Exhibit C**. The pipeline will be constructed with spare capacity, capable of servicing additional third-party customers in the surrounding area looking to lower their CO2 emissions. The “MSH Pipeline”, as used herein, shall refer to the Illinois portion of the pipeline for which WCSUS is petitioning for the issuance of a Certificate of Authority in this docket.

2. WCSUS is negotiating with Archer-Daniels-Midland Company (ADM) as the foundational customer and with several other industrial producers across the MSH footprint in both Iowa and Illinois to capture, transport, and sequester up to 12 million metric tons (“MMT”) of CO2 annually. WCSUS will be responsible for the transportation of CO2 from various customer facilities to sequestration in all cases. Responsibility for capture and sequestration will vary depending on the needs of the customers. Subject to agreement of a final binding agreement between ADM and WCSUS, it is intended that ADM would be the anchor customer for the pipeline. When fully expanded, the system will be able to capture, transport and store up to 12 MMT of CO2 annually. Pending receipt of necessary regulatory approvals, construction of the MSH is anticipated to commence in the second quarter of 2025, with in-service commencing in late 2025.

3. The proposed MSH scope includes 2 (two) CO₂ collection sites at customer premises, approximately 260 miles of new pipeline and approximately 50 above ground facilities, such as pump stations, launcher/receiver sites, and mainline valves (MLV). Within the State of Illinois, the MSH Pipeline will consist of approximately 166 miles of pipeline and approximately 33 above ground facilities. The proposed location of the MSH Pipeline in Illinois is depicted more specifically in **Exhibit D** of this Application and the location and components of the MSH Pipeline are described in more detail in Section IV of this Application.

4. WCSUS is seeking an order authorizing it to construct and operate the MSH Pipeline in Illinois. WCSUS intends to acquire all required land interests through voluntary easement agreements with landowners, a successful practice of WCSUS along with WCSUS affiliates in all projects to date.

5. This Application presents the proposed MSH Pipeline route and 200-foot project route width in Illinois, as depicted on **Exhibit D**, and described in **Exhibit E** (legal description of the route), to this Application. However, to provide additional flexibility to respond to contingencies in development of the route and project route width, WCSUS will contact landowners within a broader corridor than 200 feet, up to one-half mile or more on either side of the proposed centerline (the “Notification Corridor”), along the proposed route in Illinois to obtain permission to conduct surveys on landowners’ properties. The proposed centerline route and 200-foot project route width may be refined based on additional planned survey activities and discussions with landowners, but the final route and project route width will be within the Notification Corridor. **Exhibit F** to this Application is a list of the names and addresses of the landowners located within the Notification Corridor. As stated above, WCSUS is requesting approval of a 200-foot project width around the approved route of the pipeline in Illinois, as

allowed by Section 75/20(d) of the CO2 Act. Based on the results of its remaining surveying activities and detailed information obtained from landowners, WCSUS may submit revisions to the project route width for approval by the Commission. The final 200-foot project route width will be located within the Notification Corridor.

6. The MSH will transport captured CO2 emissions that are currently being released and emitted by ethanol facilities along the proposed route of the MSH in Iowa and will transport the CO2 to sequestration wells for injection into, and sequestration in, a saline aquifer formation. Construction and operation of the proposed MSH will provide safe and efficient transportation of CO2 and result in an overall reduction in the amounts of CO2 that would otherwise be released into the atmosphere. Subject to agreement of a final binding agreement, it is envisaged that sequestration would be provided at both existing and new ADM sites in or near Decatur, IL, that injects into the Mt. Simon saline aquifer, a proven geologic zone for CO2 sequestration. Additional sequestration capability will be developed by WCSUS in the future as commercial developments warrant.

7. The Mt. Simon Hub will bolster ethanol's position as the premier alternative fuel in America – strengthening Illinois' agriculture industry and supporting farmers, plant workers, truck drivers, and numerous other individuals who produce, market, and distribute ethanol. In addition to supporting the ethanol industry and the Illinois and Midwest agricultural economy, the Mt. Simon Hub will also result in additional economic impacts to the Illinois economy. According to an economic impact study conducted by Goss & Associates, in Illinois, the MSH Pipeline is expected to generate \$1.7 billion in economic impact and support 2,780 jobs during the first year of construction. The Illinois industries forecasted to experience the largest construction impacts are: construction (\$291.7 million), wholesale trade (\$149.4 million), professional services (\$92.5

million), real estate and rental and leasing (\$41.4 million), and transportation and warehousing (\$29.9 million). Additionally, pipeline operations will produce \$286.3 million in earnings and support 342 jobs annually.

8. The WCSUS team is comprised of industry experts with proven expertise in pipeline construction and energy infrastructure development. Collectively, the team has developed and operated thousands of miles of pipelines. WCSUS' affiliate, Wolf Midstream, built and operates the Alberta Carbon Trunk Line (ACTL) in Canada. To date, ACTL is the largest third-party anthropogenic CO₂ pipeline system in North America. Wolf Midstream built the pipeline without using eminent domain and has safely operated the carbon capture and pipeline system for over three years without incident. ACTL has captured and transported over 3.5 million tons of carbon to date.

9. WCSUS will develop, construct, and operate the Mt. Simon Hub with the guidance, leadership, experience and direction of the WCSUS organization and management team. The WCSUS management team is employed by WCSUS directly, or by WCSUS's affiliated company Wolf Infrastructure Management Inc. (WIM), which provides management services to WCSUS for development, construction, and operation of the Mt. Simon Hub. The WCSUS management team, together with third parties contracted by WCSUS, provide design, engineering, construction management, commercial finance and operational services and expertise for WCSUS's development of the MSH. Wolf Carbon Solutions is highly experienced in the pipeline and infrastructure industry with a proven management team with over 200 years of combined experience, including technical and operational expertise operating the ACTL, as well as numerous other pipelines transporting multiple commodities while maintaining a strong safety and environmental track record. The WCSUS management team works with some of the world's

largest energy and petrochemical companies as a trusted, safe, and reliable developer/owner/operator of critical infrastructure. Over the past decade, the WCSUS management team has acquired or constructed and safely operated thousands of miles of pipeline and associated infrastructure. The WCSUS team will manage the Mt. Simon Hub, providing the technical, operational, and managerial expertise and resources to design, build, operate and maintain the Mt. Simon Hub in a safe, efficient and environmentally sound manner. Further, WCSUS has retained and is working with third-party experts in the field of CO2 capture, transportation, and sequestration to assist with and validate project routing, design, construction, and operation.

10. As shown herein, and as further demonstrated in testimony submitted by WCSUS, this Application has been properly filed; WCSUS is fit, willing, and able to construct and operate the pipeline in compliance with the CO2 Act, Illinois Commerce Commission regulations and orders, and regulations and orders of applicable federal, state, and local agencies; WCSUS is negotiating agreements with sources of CO2 emissions that will result in reduction in CO2 emissions from these sources; WCSUS has filed or will file with the Pipeline and Hazardous Materials Safety Administration of the U.S. Department of Transportation (PHMSA) all forms required by that agency in advance of constructing the CO2 pipeline; WCSUS has filed or will file with the U.S. Army Corps of Engineers (USACE) all applications for permits required by that agency in advance of constructing the CO2 pipeline, and will obtain all required permits and approvals from PHMSA, the USACE and all other required permits and approvals prior to commencing construction; WCSUS is working with the Illinois Department of Agriculture (IDOA) to finalize an Agricultural Impact Mitigation Agreement (AIMA) ; WCSUS possesses the financial, managerial, legal, and technical capabilities to construct and operate the pipeline;

and the proposed pipeline is consistent with the public interest, public benefit, and legislative purpose as set forth in the CO2 Act.

II. DESCRIPTION OF WCSUS AND RELEVANT AFFILIATES

11. WCSUS US LLC, is a Delaware limited liability company with its principal offices at 1600 Broadway, Denver, CO, Suite 1900, 80202. **Exhibit A** to this Application is a certified copy of WCSUS's certificate of formation filed with the Secretary of State of Delaware and a certificate in good standing from the Delaware Secretary of State. **Exhibit B** to this Application is a certified copy of WCSUS's certificate of authority to transact business in Illinois, from the Illinois Secretary of State and a certificate of good standing from the Illinois Secretary of State.

12. WCSUS is a wholly owned subsidiary of Wolf Investments Canada LP (WIC). 100% of the membership interests of WCSUS are owned by WIC. WIC is owned by Wolf Infrastructure Canada Inc. (>99%) and Management and Director Co-Investors (<1%). Ultimately, WIC is wholly owned by Canada Pension Plan Investment Board.

13. Canada Pension Plan Investment Board (CPP Investments™) is a professional investment management organization that manages the Canada Pension Plan Fund in the best interest of the more than 21 million contributors and beneficiaries of the Canada Pension Plan. In order to build diversified portfolios of assets, investments are made around the world in public equities, private equities, real estate, infrastructure and fixed income. Headquartered in Toronto, with offices in Hong Kong, London, Luxembourg, Mumbai, New York City, San Francisco, São Paulo and Sydney, CPP Investments is governed and managed independently of the Canada Pension Plan and at arm's length from governments. At March 31, 2023, the Fund totaled \$570 billion.

14. The sole member of WCSUS is WIC. In accordance with WCSUS's limited liability company agreement, the Board of Managers of WCSUS has authority to and is responsible for managing the business and affairs of WCSUS. Wolf Infrastructure Management Inc. (WIM) provides management services, including (among other services) financing, corporate development, purchasing, facilities development, operations, marketing, administration and other management services to WIC and its affiliates (including WCSUS) through a Management Services Agreement (MSA) amongst WIC, WIM and other affiliates. WIM is a subsidiary of WIC.

15. WCSUS will be directly developing all aspects of the Mt. Simon Hub project, including capture (compression and dehydration) facilities, pipeline and sequestration infrastructure.

III. STATUTORY AND REGULATORY PROVISIONS

16. WCSUS is applying for a certificate of authority pursuant to the CO2 Act, 220 ILCS 75/1 et seq. The CO2 Act states, in pertinent part:

Sec. 5. Legislative purpose. Pipeline transportation of carbon dioxide for sequestration, enhanced oil recovery, and other purposes is declared to be a public use and service, in the public interest, and a benefit to the welfare of Illinois and the people of Illinois because pipeline transportation is necessary for sequestration, enhanced oil recovery, or other carbon management purposes and thus is an essential component to compliance with required or voluntary plans to reduce carbon dioxide emissions from "clean coal" facilities and other sources. Carbon dioxide pipelines are critical to the promotion and use of Illinois coal and also advance economic development, environmental protection, and energy security in the State.

Sec. 10. Definitions. As used in this Act:

"Carbon dioxide pipeline" or "pipeline" means the in-state portion of a pipeline, including appurtenant facilities, property rights, and easements, that are used exclusively for the purpose of transporting carbon dioxide to a point of sale, storage, enhanced oil recovery, or other carbon management application.

"Clean coal facility" has the meaning ascribed to that term in Section 1-10 of the Illinois Power Agency Act.

“Clean coal SNG facility” has the meaning ascribed to that term in Section 1-10 of the Illinois Power Agency Act.

“Commission” means the Illinois Commerce Commission.

“Sequester” has the meaning ascribed to that term in Section 1-10 of the Illinois Power Agency Act.

“Transportation” means the physical movement of carbon dioxide by pipeline conducted for a person’s own use or account or the use or account of another person or persons.

Sec. 15. Scope. This Act applies to the application process for the issuance of a certificate of authority by an owner or operator of a pipeline designed, constructed, and operated to transport and to sequester carbon dioxide produced by a clean coal facility, by a clean coal SNG facility, or by any other source that will result in the reduction of carbon dioxide emissions from that source.

Sec. 20. Application.

- (a) No person or entity may construct, operate, or repair a carbon dioxide pipeline unless the person or entity possesses a certificate of authority.
- (b) The Commission, after a hearing, may grant an application for a certificate of authority authorizing the construction and operation of a carbon dioxide pipeline if it makes a specific written finding as to each of the following:
 - (1) the application was properly filed;
 - (2) the applicant is fit, willing, and able to construct and operate the pipeline in compliance with this Act and with Commission regulations and orders of the Commission or any applicable federal agencies;
 - (3) the applicant has entered into an agreement with a clean coal facility, a clean coal SNG facility, or any other source that will result in the reduction of carbon dioxide emissions from that source;
 - (4) the applicant has filed with the Pipeline and Hazardous Materials Safety Administration of the U.S. Department of Transportation all forms required by that agency in advance of constructing a carbon dioxide pipeline;
 - (5) the applicant has filed with the U.S. Army Corps of Engineers all applications for permits required by that agency in advance of constructing a carbon dioxide pipeline;
 - (6) the applicant has entered into an agreement with the Illinois Department of Agriculture that governs the mitigation of agricultural impacts associated with the construction of the proposed pipeline;
 - (7) the applicant possesses the financial, managerial, legal, and technical qualifications necessary to construct and operate the proposed carbon dioxide pipeline; and
 - (8) the proposed pipeline is consistent with the public interest, public benefit, and legislative purpose as set forth in this Act. In addition

to any other evidence the Commission may consider on this specific finding, the Commission shall consider the following:

- (A) any evidence of the effect of the pipeline upon the economy, infrastructure, and public safety presented by local governmental units that will be affected by the proposed pipeline route;
- (B) any evidence of the effect of the pipeline upon property values presented by property owners who will be affected by the proposed pipeline or facility, provided that the Commission need not hear evidence as to the actual valuation of property such as that as would be presented to and determined by the courts under the Eminent Domain Act;
- (C) any evidence presented by the Department of Commerce and Economic Opportunity regarding the current and future local, State-wide, or regional economic effect, direct or indirect, of the proposed pipeline or facility including, but not limited to, ability of the State to attract economic growth, meet future energy requirements, and ensure compliance with environmental requirements and goals;
- (D) any evidence addressing the factors described in items (1) through (8) of this subsection (b) or other relevant factors that is presented by any other State agency, the applicant, a party, or other entity that participates in the proceeding, including evidence presented by the Commission's staff; and
- (E) any evidence presented by any State or federal governmental entity as to how the proposed pipeline will affect the security, stability, and reliability of energy.

In its written order, the Commission shall address all of the evidence presented, and if the order is contrary to any of the evidence, the Commission shall state the reasons for its determination with regard to that evidence.

- (c) When an applicant files its application for a certificate of authority with the Commission, it shall provide notice to each local government where the proposed pipeline will be located and include a map of the proposed pipeline route. The applicant shall also publish notice in a newspaper of general circulation in each county where the proposed pipeline is located.
- (d) An application for a certificate of authority filed pursuant to this Section shall request either that the Commission review and approve a specific route for a carbon dioxide pipeline, or that the Commission review and approve a project route width that identifies the areas in which the pipeline would be located, with such width ranging from the minimum width required for a pipeline right-of-way up to 200 feet in width. A map of the route or route width shall be included in the application. The purpose for allowing the option of review and approval of a project route width is to provide increased flexibility during the construction process to accommodate

specific landowner requests, avoid environmentally sensitive areas, or address special environmental permitting requirements.

- (e) The Commission's rules shall ensure that notice of an application for a certificate of authority is provided within 30 days after filing to the landowners along a proposed project route, or to the potentially affected landowners within a proposed project route width, using the notification procedures set forth in the Commission's rules. If the Commission grants approval of a project route width as opposed to a specific project route, then the applicant must, as it finalizes the actual pipeline alignment within the project route width, file its final list of affected landowners with the Commission at least 14 days in advance of beginning construction on any tract within the project route width and also provide the Commission with at least 14 days' notice before filing a complaint for eminent domain in the circuit court with regard to any tract within the project route width.
- (f) The Commission shall make its determination on any application for a certificate of authority filed pursuant to this Section and issue its final order within 11 months after the date that the application is filed. The Commission's failure to act within this time period shall not be deemed an approval or denial of the application.
- (g) A final order of the Commission granting a certificate of authority pursuant to this Act shall be conditioned upon the applicant obtaining all required permits or approvals from the Pipeline and Hazardous Materials Safety Administration of the U.S. Department of Transportation, U.S. Army Corps of Engineers, and Illinois Department of Agriculture, in addition to all other permits and approvals necessary for the construction and operation of the pipeline prior to the start of any construction. The final order must specifically prohibit the start of any construction until all such permits and approvals have been obtained.
- (h) Within 6 months after the Commission's entry of an order approving either a specific route or a project route width under this Section, the owner or operator of the carbon dioxide pipeline that receives that order may file supplemental applications for minor route deviations outside the approved project route width, allowing for additions or changes to the approved route to address environmental concerns encountered during construction or to accommodate landowner requests. The supplemental application shall specifically detail the environmental concerns or landowner requests prompting the route changes, including the names of any landowners or entities involved. Notice of a supplemental application shall be provided to any State agency or unit of local government that appeared in the original proceeding and to any landowner affected by the proposed route deviation at the time that supplemental application is filed. The route deviations shall be approved by the Commission no sooner than 90 days after all interested parties receive notice of the supplemental application, unless a written

objection is filed to the supplemental application within 45 days after such notice is received. If a written objection is filed, then the Commission shall issue an order either granting or denying the route deviation within 90 days after the filing of the objection. Hearings on any such supplemental application shall be limited to the reasonableness of the specific variance proposed, and the issues of the public interest and benefit of the project or fitness of the applicant shall be considered only to the extent that the route deviation has raised new concerns with regard to those issues.

- (i) A certificate of authority to construct and operate a carbon dioxide pipeline issued by the Commission shall contain and include all of the following:
 - (1) a grant of authority to construct and operate a carbon dioxide pipeline as requested in the application, subject to the laws of this State; and
 - (2) a limited grant of authority to take and acquire an easement in any property or interest in property for the construction, maintenance, or operation of a carbon dioxide pipeline in the manner provided for the exercise of the power of eminent domain under the Eminent Domain Act. The limited grant of authority shall be restricted to, and exercised solely for, the purpose of siting, rights-of-way, and easements appurtenant, including construction and maintenance. The applicant shall not exercise this power until it has used reasonable and good faith efforts to acquire the property or easement thereto. The applicant may thereafter use this power when the applicant determines that the easement is necessary to avoid unreasonable delay or economic hardship to the progress of activities carried out pursuant to the certificate of authority.

Sec. 25. Procedures. Notwithstanding any other provision of this Act, any power granted pursuant to this Act to acquire an easement is subject to, and shall be exercised in accordance with, the Eminent Domain Act.

Sec. 30. Safety. Inasmuch as the regulation of the construction, maintenance, and operation of pipelines transporting carbon dioxide, whether interstate or intrastate, falls within the statutory and regulatory jurisdiction of the Pipeline and Hazardous Material Safety Administration of the federal Department of Transportation, each carbon dioxide pipeline owner shall construct, maintain, and operate all of its pipelines, related facilities, and equipment in this State in a manner that complies fully with all federal laws and regulations governing the construction, maintenance, and operation of pipelines transporting carbon dioxide, as from time to time amended, and which otherwise poses no undue risk to its employees or the public. This Section shall not be interpreted to act in derogation of any such federal laws or regulations.

Sec. 99. Effective date. This Act takes effect upon becoming law.

17. 83 Ill. Admin. Code Part 302 contains regulations that apply “whenever any Owner or Operator seeks to construct, operate or maintain a carbon dioxide pipeline under the [CO2 Pipeline Act].” 83 Ill. Admin. Code § 302.20. 83 Ill. Admin. Code § 302.30 provides:

- (a) Prior to any Owner or Operator or its agent initiating contact with any landowner (the record owner of the land as disclosed by the records of the tax collector of the county where the land is located) to negotiate the acquisition of an easement in property or any interest in property, it shall file with the Illinois Commerce Commission an application containing, in addition to the matters set forth in Section 20(b) of the Act, a brief description of the proposed project, a map of the route or route width showing either the specific route for the carbon dioxide pipeline (including size of site and width of easement to be sought), or the project route width that identifies the areas in which the pipeline would be located, with such route ranging from the minimum width required for the pipeline right-of-way up to 200 feet in width [220 ILCS 75/20(d)], and pipeline length and diameter, and the location of any above ground facilities (compressor stations, valves, etc.).
- (b) When an applicant files its application for a certificate of authority with the Commission, it shall provide notice to each local government where the proposed pipeline will be located and include a map of the proposed pipeline route. The applicant shall also publish notice in a newspaper of general circulation in each county where the proposed pipeline is located. [220 ILCS 75/20(c)]
- (c) The applicant shall include with the application, when filed with the Commission, a list containing the name and address of each owner of record of the land along the proposed route, or within a proposed project route width, as disclosed by the records of the tax collector of the county in which the land is located, as of not more than 30 days prior to the filing of the application. Notice of the filing of an application for a certificate of authority shall be provided by the Commission within 30 days after filing to the landowners along the proposed route, or to the potentially affected landowners within a proposed project route width. [220 ILCS 75/20(e)] Notice shall include the time and place scheduled for the initial hearing on the application, and shall include the information required by Appendix A. This subsection’s requirements for notice to owners of record shall not be deemed jurisdictional and the omission of the name and address of an owner of record from the list or lack of notice shall in no way invalidate a subsequent order of the Commission relating to the application.

IV. THE WCSUS MT. SIMON HUB INCLUDING PROPOSED ROUTE AND PROJECT WIDTH

18. WCSUS and ADM are at an advanced stage of negotiating an agreement to connect ADM ethanol facilities in Iowa, and Wolf is advancing commercial discussions with several other industrial producers across the MSH footprint in both Iowa and Illinois that together will capture, transport, and store up to 12 million metric tons (“MMT”) of CO₂ annually. WCSUS would be responsible for the transportation of CO₂ from the industrial facility to sequestration in all cases. Responsibility for capture and sequestration would vary depending on the needs of the customers and the terms of the final commercial agreements. When fully expanded, the system will be able to capture, transport and store up to 12 MMT of CO₂ annually.

19. MSH consists of a total of approximately 259.9 miles of new pipeline in Illinois and Iowa, along which there will be 50 above ground facilities. In Illinois, the proposed MSH Pipeline consists of approximately 165.7 miles of new pipeline and 33 above ground facilities in parts of Rock Island, Henry, Knox, Stark, Peoria, Tazewell, Logan, DeWitt, and Macon Counties. **Exhibit D** to this Application provides a map showing the proposed centerline of the route of the MSH Pipeline components in Illinois. The map shows the proposed route of both the approximately 158.3-mile mainline pipeline in Illinois (the “Trunkline”), and an approximately 7.4-mile lateral pipeline (the “Decatur Lateral”) that interconnects with the Trunkline approximately 7 miles north of Decatur, Illinois in northern Macon County. The up to 20-inch outside diameter Trunkline crosses the Mississippi River into Rock Island County and travels southeast to Macon County. WCSUS is proposing a specific route and 200-foot project route width for the pipeline in Illinois. **Exhibit E** to this Application provides a legal description of the Illinois route of the pipeline, including the Trunkline, and Decatur Lateral. During the course of these proceedings, based on completion of civil and environmental surveys and discussions with

landowners, WCSUS may submit revisions (within the Notification Corridor) to the project route width. Additionally, WCSUS will file its final list of affected landowners with the Commission at least 14 days prior to beginning construction in Illinois, in accordance with 220 ILCS 75/20(e).

20. WCSUS' key objective in determining the proposed route of the Mt. Simon Hub, including the Illinois section, is minimizing the collective impact from the MSH Pipeline along its route, as well as reflecting the preferences of the landowners. A WCSUS team of subject matter experts from multiple disciplines established a primary corridor that accounted for and sought to minimize impacts on populated areas, residences and business locations, public lands, environmentally and culturally sensitive areas, geologic features, mines, other existing infrastructure, long-term pipeline safety, and more.

21. Specialized CO₂ equipment used to capture and condition CO₂ will be installed at each customer's emitting facility by either WCSUS or the emitter, on the customer's property, and will include dehydration equipment to remove water, and cooling and compression equipment to compress the CO₂ gas to a supercritical phase to allow for increased transportation efficiency and volume. The carbon capture system is not part of the CO₂ pipeline for which a certificate of authority is being requested. There will be continuous monitoring of the CO₂ stream prior to entering WCSUS pipeline transportation system to ensure that the quality of the CO₂ meets or exceeds the necessary compositional quality to ensure safe and efficient transport of the product to the sequestration site. The stream, comprised of at least 98% compressed CO₂, will enter the pipeline from each capture facility at pressure between 1,300 to 2,100 psi and temperature greater than 88 degrees F, meaning that each segment of the pipeline will be transporting CO₂ as a supercritical fluid until its temperature drops below 88 degrees.

22. The underground sequestration sites, which are not part of the CO₂ pipeline for which a certificate of authority is being requested, are saline aquifers located below parts of these counties, within the Mt. Simon geologic formation. The injection wells at the sequestration sites, which will direct the captured and compressed CO₂ more than 5,800 feet beneath the ground surface, have or will receive permits issued under authority of the U.S. Environmental Protection Agency.

23. Subject to finalizing the agreement, it is envisaged that ADM would be responsible for the acquisition and management of pore space and related sequestration wells required for ADM-sequestering its initial CO₂. It is intended that the final agreement between Wolf and ADM would include provisions committing ADM to provide the required sequestration capability for CO₂. Wolf would acquire pore space and install sequestration wells, as required, to meet the needs of additional customers.

24. The design, construction, operation, and maintenance of the MSH Pipeline is regulated by the PHMSA, Office of Pipeline Safety, pursuant to federal laws and regulations, primarily 49 C.F.R. Part 195. Construction, installation, and operation of the MSH Pipeline will be done in a manner that complies with all applicable statutes and regulations along the pipeline route. Agencies with jurisdiction over applicable environmental protection considerations include the USACE, U.S. Fish and Wildlife Service, Illinois Department of Natural Resources, Illinois Department of Agriculture, and Illinois Environmental Protection Agency. Non-environmental permits include state, county, and local road crossings and road approaches, railroad crossings, and floodplain certificates. A preliminary list of anticipated permits, approvals, and consultation requirements, including the status and anticipated timeline for those permits, approvals and consultation requirements, is provided as **Exhibit G** to this Application. WCSUS commits to

constructing the MSH Pipeline in accordance with all permit conditions and only in areas where required permits or approvals have been obtained. In addition, WCSUS commits that it has filed or will file with the PHMSA all forms required by that agency in advance of constructing the CO2 pipeline in Illinois; that it has filed or will file with the USACE all applications for permits required by that agency in advance of constructing the CO2 pipeline in Illinois; and that it will obtain all required permits and approvals prior to commencing construction in Illinois. Additionally, WCSUS is currently actively engaged in negotiating the AIMA for the MSH Pipeline with the IDOA.

V. THE MSH IS CONSISTENT WITH THE PUBLIC INTEREST, PUBLIC BENEFIT, AND LEGISLATIVE PURPOSE OF THE CO2 ACT

25. Section 75/5 of the CO2 Act sets forth the following legislative purpose: Pipeline transportation of carbon dioxide for sequestration, enhanced oil recovery, and other purposes is declared to be a public use and service, in the public interest, and a benefit to the welfare of Illinois and the people of Illinois because pipeline transportation is necessary for sequestration, enhanced oil recovery, or other carbon management purposes and thus is an essential component to compliance with required or voluntary plans to reduce carbon dioxide emissions from “clean coal” facilities and other sources. Carbon dioxide pipelines are critical to the promotion and use of Illinois coal and also advance economic development, environmental protection, and energy security in the State.

26. WCSUS proposed Mt. Simon Hub Pipeline is fully consistent with this legislative purpose of the CO2 Act and therefore will be a public use and service, in the public interest, and a benefit to the welfare of Illinois and the people of Illinois, as stated in Section 75/5. The MSH will capture and transport CO2 to locations for sequestration and other carbon management purposes as described in this Application and therefore will contribute to and support compliance with and

achievement of required and voluntary plans to reduce CO2 emissions from emitting sources in Iowa and Illinois. WCSUS is negotiating agreements with facilities along the MSH Pipeline footprint that produce and emit CO2, to utilize the MSH, and anticipate entering into agreements with other CO2-emitting facilities. The following paragraphs discuss the environmental benefits, the ability of MSH to safely and efficiently transport and sequester CO2, MSH's support for the ethanol industry, MSH's support for Illinois and Midwest agriculture, other economic benefits that MSH provides to Illinois and the Region and MSH's support for the development of new business and the industry.

A. Environmental Benefits

27. CO2 emissions are not localized to the source or to the airsheds where the emissions occur, they are widespread, making capture, transportation, and sequestration of CO2 from ethanol facilities beneficial to the public in areas beyond just the Mt. Simon Hub's operating areas of Illinois and Iowa. Carbon reduction and decarbonization initiatives have been announced by numerous countries, industries, and regions. The United States has multiple targets in carbon reduction, including the Net Zero World Initiative, a project aimed at leading a global transition to net zero emissions by 2050¹, and the 2030 Greenhouse Gas Pollution Reduction that aims to have a 50 to 52% reduction from the 2005 levels.² The ethanol industry also pledged in 2022 to reduce greenhouse gas emissions 70% by 2030 and achieve net zero ethanol production by 2050.³ The MSH's ability to transport and safely sequester captured CO2 from ethanol facilities that are not

¹ <https://www.energy.gov/articles/us-launches-net-zero-world-initiative-accelerate-global-energy-system-decarbonization>

² <https://www.wri.org/outcomes/us-government-sets-target-reduce-emissions-50-52-2030>

³ <https://drgnews.com/2022/11/07/rfa-stresses-ethanols-low-carbon-benefits-and-net-zero-future/#:~:text=By%202050%2C%20RFA's%20members%20pledge,reduction%20actions%20that%20were%20considered>

located near feasible sequestration locations is essential for the United States goals as well as the ethanol industries for reduction of CO₂.

B. Safe and Efficient Transportation and Sequestration

28. The MSH will connect to ethanol facilities in Iowa that lack immediate proximity to the requisite geological formations for implementing carbon sequestration, and therefore must find a means to transport CO₂ to a feasible sequestration location. MSH expects to connect with additional ethanol facilities in Illinois in the future. Meeting this need necessitates an interstate pipeline system to transport the CO₂ long distances safely and efficiently. The design, construction, and operation of pipelines, including the MSH Pipeline, are heavily regulated and subject to regulatory scrutiny and oversight.

29. The sequestration location for the MSH, the Mt. Simon formation in Illinois, is one of the most thoroughly studied formations for sequestration, including by the U.S. Department of Energy's Carbon Storage Program. The Mt. Simon formation is a proven and active location for successful sequestration, has ample capacity and availability to sequester hundreds of millions of metric tons of CO₂, and is readily accessible in south central Illinois. The MSH Pipeline will enable CO₂-emitting facilities along the pipeline route to have timely, safe, and efficient access to this sequestration location.

C. Supporting the Ethanol Industry

30. The Mt. Simon Hub will immediately bolster ethanol's position as the premier alternative fuel in America – strengthening Illinois' agriculture industry and supporting farmers, plant workers, truck drivers, and numerous other individuals who produce, market, and distribute ethanol. Illinois is the third largest producer of corn ethanol in the United States; Iowa is the largest

producer, representing over 37 percent of the combined U.S. production.⁴ According to a recent report prepared for the Iowa Renewable Fuels Association (IRFA), capturing CO₂ and storing it underground in a geological formation like the Mt. Simon Sandstone has the potential to boost an ethanol plant's gross operating margin by 284 percent, bringing appreciable economic benefits to entities up and down the ethanol supply chain, and the communities in which they operate.⁵

D. Supporting Illinois and Midwest Agriculture

31. By strengthening Illinois' ethanol industry, the Mt. Simon Hub stands to improve the economic well-being of Illinois' agricultural economy. Approximately 30% of the state's corn crop is dedicated to the production of ethanol, making renewable fuel demand a significant factor in the price of corn, and on land values where corn is produced in Illinois.

E. Other Economic Benefits to Illinois and the Region

32. In addition to the agricultural sector, the construction, utilities, and transportation and warehousing industries are expected to yield significant economic benefits over the life of the system. A study on the economic impact of the proposed Mt. Simon Hub, performed by the economic growth and development analytics company, Goss & Associates, estimates that the project will generate \$2.8 billion in economic impact across Iowa and Illinois. The project is expected to support 4,499 jobs during the first-year of construction and an annual average of 704 jobs during operation and maintenance, generating more than \$780 million in wages and salaries.

33. In Illinois, the Mt. Simon Hub is expected to generate \$1.7 billion in economic impact and support 2,780 jobs during the first year of construction. The Illinois industries

⁴ Renewable Fuels Association, Zeroing in On New Opportunities: 2022 Ethanol Industry Outlook, <https://d35t1syewk4d42.cloudfront.net/file/2145/RFA%202022%20Outlook.pdf>

⁵ Iowa Renewable Fuels Association, Comparative Economics of Carbon Sequestration for Iowa Ethanol Plants, https://iowarfa.org/wp-content/uploads/2023/02/230210-FINAL-IRFA-Comparative-Economics-of-Carbon-Sequestration-for-Iowa-Ethanol-Plants_Phase-1.pdf

forecasted to experience the largest construction impacts are: construction (\$291.7 million), wholesale trade (\$149.4 million), professional services (\$92.5 million), real estate and rental and leasing (\$41.4 million), and transportation and warehousing (\$29.9 million).

34. Additionally, WCSUS is committed to sourcing qualified local and regional skilled labor through the most respected international unions across multiple disciplines. On April 25, 2023, WCSUS entered into Letters of Intent (LOI) with the four leading pipeline construction trade unions in association with the development and construction of the Mt. Simon Hub.

F. Development of New Business and Industry

35. The Mt. Simon Hub will be constructed with spare capacity, capable of servicing additional third-party customers with a need to lower their future carbon emissions. This capability is extremely attractive for sectors in which carbon emissions are particularly difficult to abate, such as the cement, fertilizer, and steel industries. The Mt. Simon Hub will have the ability to service existing industrial facilities in these sectors as well, as firms are looking to locate to Illinois to plug into the Mt. Simon Hub's CCS infrastructure.

36. Once constructed, the Mt. Simon Hub will also support the development of sustainable, innovative energy resources, including the development of blue hydrogen, e-methanol, and sustainable aviation fuel (SAF). Airlines across the U.S. have already taken delivery of millions of gallons of SAF, and numerous Fortune 100 companies are partnering with airlines on initiatives to reduce the carbon footprint of passenger and cargo transportation.⁶ Additionally, legislation has been enacted at both the federal and state level establishing tax credits for the production of SAF in an effort to bolster U.S. and Illinois leadership in the development of SAF resources.

⁶ <https://www.prnewswire.com/news-releases/united-to-triple-saf-use-in-2023-adds-saf-on-flights-at-san-francisco-airport-301815431.html>

VI. WCSUS IS FIT, WILLING AND ABLE AND POSSESSES THE FINANCIAL, MANAGERIAL, LEGAL, AND TECHNICAL QUALIFICATIONS NECESSARY TO CONSTRUCT AND OPERATE THE CARBON DIOXIDE PIPELINE

37. WCSUS is fit, willing, and able to construct and operate the Mt. Simon Hub in compliance with the CO₂ Act, Commission regulations and orders, and regulations and orders of applicable federal agencies, and has the financial, managerial, legal and technical capabilities to construct and operate the pipeline, as required by Section 75/20(b)(2) and (7) of the CO₂ Act.

38. WCSUS is highly experienced in the pipeline industry with a proven management team with over 200 years of combined industry experience in the pipeline and infrastructure industries, including technical and operational expertise operating the ACTL CO₂ pipeline, the largest anthropogenic CO₂ pipeline in North America, as well as pipelines transporting multiple commodities, and has a strong safety and environmental track record. The management team works with some of the world's largest energy and petrochemical companies as a trusted, safe, and reliable developer/owner/operator of critical infrastructure. Over the past decade, the WCSUS team has acquired or constructed and safely operated thousands of miles of pipeline and associated infrastructure. WCSUS has the financial capability to raise and provide the capital needed to fund the development, construction, and operation of the MSH, which has an estimated development and construction cost of approximately one billion dollars. The pre-construction development phase of the project, through receipt of all material permits for construction of the CO₂ capture, transportation and sequestration assets, is being funded through capital contributions from its parent entity WIC. The construction phase of the project is expected to be funded by a mix of equity and/or a project financing facility sourced by a consortium of lenders. On or near the commercial operation date of MSH, a long-term debt facility will be put in place to refinance the construction loans. This sequence of development phase, construction phase, and long-term

operational phase funding is common for infrastructure projects such as pipelines and renewable energy facilities.

39. WCSUS is committed to building and operating the MSH Pipeline to meet and exceed regulatory and safety requirements while minimizing the collective impact on the environment, landowners, and the public during construction and operations. The WCSUS management team will manage the MSH Pipeline providing the technical, operational, and managerial expertise and resources to design, build, operate and maintain it in a safe, efficient and environmentally sound manner. Below is an overview of WCSUS' key management, technical, financial and commercial personnel and consultants.

- (a) **Dean Ferguson**, President is the senior executive with overall accountability for WCSUS. His Direct Testimony appears in WCSUS Exhibit 1.0.
- (b) **Nick Noppinger**, SVP Corporate Development, describes the commercial arrangements and interactions with customers in support of the MSH Pipeline. His Direct Testimony appears in WCSUS Exhibit 2.0.
- (c) **Bruce Gray**, VP Corporate Development, provides technical and project management support for WCSUS.
- (d) **Patrick Brierley**, Vice President of Engineering and Operations, provides testimony that describes the MSH Pipeline's design, engineering and construction plans, including its compliance with safety and environmental regulations. His testimony also deals with operations, including pipeline safety, policies and procedures and the Emergency Response Plan including its interaction with emergency responders. His Direct Testimony appears in WCSUS Exhibit 3.0.
- (e) **Todd Petersen**, Director of Project Execution, is responsible for pre-construction routing and constructability, along with project execution and post-construction mitigation and remediation.
- (f) **Tracey McDanel**, Director, Land and Community Relations provides testimony in support of Wolf Carbon Solutions' notice and outreach efforts to landowners and the public. She also discusses WCSUS's plans and approach to acquiring easements for the MSH Pipeline. Her Direct Testimony appears in WCSUS Exhibit 4.0.

- (g) **Matt Kindred**, Senior Project Manager for KC Harvey Environmental, provides testimony on the development of the proposed route for the pipeline in Illinois, the permits required to enable construction and the progress related to the Agricultural Impact Mitigation Agreement with the Illinois Department of Agriculture. His Direct Testimony appears in WCSUS Exhibit 5.0.
- (h) **Dr. Ernest Goss**, Principal of Goss & Associates and MacAllister Chair of Regional Economics at Creighton University, provides testimony discussing the results of an economic impact study of the construction and operation of the Mount Simon Hub. His Direct Testimony appears in WCSUS Exhibit 6.0.

40. Furthermore, for the MSH Pipeline, WCSUS has retained and is working with leading experts in the field of CO2 transportation and sequestration to assist and validate the MSH Pipeline's routing, design, construction, and operation plans (additional information regarding these experts is provided in Paragraph 47 below).

41. WCSUS possesses the legal qualifications necessary to construct and operate the MSH Pipeline, having retained experienced outside counsel to assist with federal and state regulatory, environmental, and other permitting, and real estate matters. WCSUS understands the requirements of the CO2 Act and the requirements of environmental and other agencies, including PHMSA, USACE, the IDOA, the U.S. Fish and Wildlife Service, and the Illinois Environmental Protection Agency, from which permits and approvals may be required to construct and operate the MSH Pipeline, as illustrated by the anticipated permits and approvals list provided as Exhibit G to this Application.

42. WCSUS has the managerial and technical qualifications necessary to design, construct, and operate the MSH Pipeline to meet or exceed regulatory requirements and industry standards. WCSUS has and will continue to consult with independent experts throughout the MSH Pipeline development process to address safety requirements specific to CO2 pipelines. The pipeline will have a maximum operating pressure ("MOP") of 2,160 psig, in accordance with

PHMSA regulations, with a normal operational range between 1,400 and 2,100 psig. WCSUS will utilize conservative design safety factors and will pressure test the pipeline system at pressures exceeding the MOP, prior to placing the system in-service. The metallurgical and dimensional properties of the pipeline have been determined in accordance with PHMSA requirements and account for all pressure ranges, temperature ranges, and risk for both ductile and brittle fracture. Such properties include the use of high-yield carbon steel with added toughness parameters, and an appropriate minimum, standard pipe wall thickness for the Decatur Lateral and the Trunkline; with increased thickness in certain areas and 72% specified minimum yield strength, in accordance with or exceeding PHMSA regulations and current industry standards including APL-5L PSL2.

43. The steel pipe fabrication processes will be performed in accordance with WCSUS's specifications and applicable PHMSA requirements and industry standards. The pipe will be inspected and integrity-tested at the pipe mill for quality assurance. The pipe will be externally coated at the factory with 14-16 mils fusion-bonded epoxy to protect against corrosion. Pipe segments to be installed via trenchless methods will have an additional 30-50 mils of abrasive resistant outer coating. All field welded pipe joints will utilize non-shielding field-applied two-part epoxy at girth welds. Coating in a controlled environment, such as at the factory, greatly enhances the efficacy of the process. The new pipe will be transported in accordance with Federal regulations and industry standards to the installation location. The coating will be re-inspected multiple times in the field during each phase of installation.

44. The pipeline will be installed using different techniques (conventional, bore, or horizontal directional drilling [HDD]) depending on site-specific conditions and factors along the route. The primary method of installation of the pipeline will be conventional installation via open trench to at a depth of at least five (5) feet with a separation of at least 12" inches or as required

by regulations between the pipeline and existing infrastructure such as district drainage and existing utilities. As an additional proactive measure to prevent damage by third parties, which are the largest threat to pipeline integrity, WCSUS will evaluate the installation of warning tape approximately 2 feet above the pipeline, below the plow line in applicable situations. Bore and HDD methods will be used when surface disturbance from trenching is not desired or feasible such as when crossing roads, railroads, and large waterbodies or other sensitive resources or areas. When the bore method is used the pipe will typically be installed at a depth of at least 10 feet and when HDD is used it will typically be installed at a depth of 25-50 feet or deeper. Additional pipeline protective measures will include an abrasion resistant overcoat, applied on top of the fusion-bonded epoxy on pipe to be installed via bore or HDD, to further protect pipeline integrity by adding a reinforced coating layer to protect against physical encounters in the subsurface trenchless installation.

45. All disturbed areas along the MSH Pipeline route, except for above ground facilities, will be restored to enable the property to revert to preconstruction land uses. Specific measures will be implemented during construction to enhance and expedite the restoration of disturbed lands to pre-construction condition. Such measures will include topsoil management, soil-segregation, erosion control practices, decompaction and timely restoration. Specifics of these measures will be provided in documents that are in development such as the Stormwater Pollution Prevention Plan and the AIMA to be entered into with the IDOA. Although, as of the date of this Application, the AIMA has not been executed, WCSUS has been consulting and coordinating with the IDOA to achieve an executed AIMA that will be filed with the Commission upon availability. In accordance with Section 75/20(b)(6) of the CO2 Act, WCSUS commits that it will not commence construction in Illinois prior to entering into and executing an AIMA with the IDOA.

46. The installation of the pipeline will be subject to regulatory inspection. PHMSA will perform multiple inspections documenting compliance with its regulations and with specifications; and the IDOA is expected to assign inspectors to the construction of the MSH Pipeline to monitor compliance with the AIMA. In addition, WCSUS will employ on the pipeline a robust 3rd party inspection program employing utility, welding, coating, safety, agricultural, and environmental inspectors, none of which are affiliated with WCSUS and its affiliates or the pipeline contractors, to ensure compliance with applicable specifications, standards, regulatory requirements, and commitments.

47. WCSUS will partner with leading firms in the industry to assist in the overall design of the MSH Pipeline. Independent experts in assurance and risk management in the pipeline industry will be retained to validate WCSUS metallurgical analysis of the line pipe to be installed in the system. WCSUS will facilitate hazard identification and risk analysis using proprietary software, including for potential vapor cloud dispersion for controlled and accidental releases of CO₂. WCSUS has also retained Integrated Modelling, Inc. for air dispersion modeling, and, EXP Engineering Services has been retained to perform a geohazards assessment of the route of the Mt. Simon Hub to identify additional mitigation measures that may be appropriate.

48. The Integrated Modelling and EXP analyses are being utilized in the MSH Pipeline detailed design process for the purpose of enhancing public safety. The design methods to enhance safety include but are not limited to increased wall thickness (compared to baseline), placement of additional isolation valves with shorter spacing distances than required by regulations, use of HDD installation methods, increased burial depth, redundant leak detection methods, and redundant communication systems. Cathodic-protection systems will be installed to prevent corrosion and preserve the integrity of the pipeline.

49. WCSUS will contract a primary engineering firm to perform the detailed engineering design for the pipeline, MLV settings, launcher and receiver assemblies, booster pump facilities, and CO2 capture facilities.

50. Selection of the construction contractors is expected to occur after receipt of all material permits necessary to construct the Mt. Simon Hub. WCSUS has issued a letter of intent to cooperate with four trade Unions (Laborer' International Union of North America, International Union of Operating Engineers, International Brotherhood of Teamsters, and United Association of Journeymen and Apprentices of the Plumbing and Pipefitting Industry) and is currently working with the Unions on developing a project labor agreement, to ensure highly skilled and qualified labor resources to support construction of the MSH. WCSUS is committed to utilizing highly qualified and experienced resources to perform construction. Employing such skilled workforce further ensures that the Mt. Simon Hub will be constructed as designed to meet and/or exceed all applicable standards.

51. To ensure safe operation of the line, WCSUS will install numerous remote controlled MLVs to allow for prompt response and isolation of line segments in the unlikely event of an emergency. The valves will be placed based on criteria which will include valve spacing along the pipeline route of no more (and in some segments less) than 7.5 miles between MLVs in High Consequence Areas ("HCAs") and no more (and in some segments less) than 20 miles between MLVs in non-HCAs, and additional MLVs in accordance with 49 CFR Section 195.260. Every valve site, launcher/receiver site, and booster station will be connected to an Operations Control Center ("OCC") by modern communication facilities; redundant communication and power systems will be installed to ensure constant connectivity and flow of information, thereby

enhancing safe operation. In accordance with PHMSA requirements, the OCC will be continuously manned and monitored (24-hours/day, 365 days/year) by at least 2 individuals at all times.

52. WCSUS will develop and install a comprehensive leak detection system that consists of both non-continuous and continuous monitoring. The non-continuous components of the leak detection system will consist of aerial patrol (minimum 2 times per month) and in-line inspection tool pigging operations to check for corrosion (initial baseline at installation and subsequently at a minimum 5-year inspection interval). The continuous components of the leak detection system will include compensated mass balance, real time transient model, and negative pressure wave computational methodology. Other supplemental external leak detection monitoring is being evaluated.

53. The entire pipeline system will be thoroughly tested and inspected in accordance with or exceedance of applicable regulations and industry standards to validate the integrity of the line prior to commencing operations and flow of any CO₂. These inspections include integrity examinations of the coating during the multiple stages of handling and installing the pipe; performing non-destructive testing of all field welds (well in exceedance of the 10 percent required by PHMSA); successfully hydrostatic testing the pipeline to at least 1.25 times the MOP; inspection of the pipeline post-installation to validate that damage did not occur during installation. The pipeline system will only go into service after detailed inspection and review (Pre-Start-up Safety Review) to verify compliance with applicable regulations and construction and installation standards and requirements.

54. The pipeline location will be visibly marked in accordance with federal regulations, including posted signage at road and highway crossings, commercially navigable waterways, and other locations to alert the public to the presence of an underground line. Signage will include

owner contact and emergency information. WCSUS will participate in State and Federal 811 One-Call systems for damage prevention and public awareness.

55. WCSUS anticipates 20-30 full time employees stationed along the Mt. Simon Hub, including up to 20 in Illinois. As described above, WCSUS will install and utilize pipeline control and leak detection systems and advanced computerized control, monitoring, and detection equipment along the pipeline network. The Operation Manual for the MSH Pipeline is being developed and will be finalized prior to operation; however, many components of how the system will be operated are already known.

56. During operations, the MSH Pipeline will be subjected to a variety of inspections to verify its continued integrity and compliance with all standards. The system will be examined at regular intervals using internal-inspection technology. To prevent internal corrosion, all captured CO₂ will have to meet strict specifications that are continuously tested for at the capture facilities prior to entering the pipeline system. Controls and safety equipment will be tested and calibrated on a routine basis. It is planned that the MSH Pipeline will be patrolled and inspected via aerial surveillance not less than 26 times per year, to detect abnormal conditions and dangerous activities (e.g., unauthorized excavation) along the routes of the lines.

57. The Mt. Simon Hub will use an advanced Supervisory Control and Data Acquisition (“SCADA”) system that continuously monitors pressure, temperature, and flow of the CO₂. Information collected by the monitoring devices will be constantly communicated (24 hours/day, 365 days/year) to the OCC. The system is designed and will be installed with back-up power and communication abilities to ensure connectivity is constant in the event an interruption in the primary source is experienced. Utilizing modern pipeline monitoring and control technology, the OCC can safely operate the pipeline system by maintaining the established

operating parameters and will be capable of remotely isolating pipeline segments when alerted to abnormal operating conditions or if safety parameters are exceeded. The Computational Pipeline Monitoring System, a subsystem of SCADA, analyzes deviations of flow through the pipeline, improving the ability to identify leaks and other abnormal operating conditions, and is one of several leak-detection capabilities. In addition to the ability to control the system remotely, local automated controls and manual overrides can control and operate the pipeline should remote communications fail.

58. Trained OCC personnel will follow strict procedures to direct actions during normal and abnormal operations to prevent the risk of a release. WCSUS is also developing a robust Integrity Management Program, in compliance with PHMSA regulations, that will continually assess the pipeline for potential risks to the system utilizing all available information, identify preventative and mitigative measures to address the risks, specify criteria for remedial actions to address possible integrity concerns raised by the analysis, and implement procedures, as necessary. Such systems and procedures, in addition to detailed operation and maintenance programs, routine inspections, regular employee training, detailed coordination with emergency management and response outfits, and comprehensive public awareness and education efforts, combine to optimize safe operation and minimize the risk of a release. WCSUS employees and/or qualified contractors located along the MSH Pipeline in Illinois and other states will be strategically hired and based so that they are able to provide a prompt response for pipeline operations, maintenance, and repairs.

59. WCSUS will conduct extensive public education and outreach programs, including damage prevention programs that meet or exceed PHMSA and industry requirements concerning public awareness of pipelines and pipeline safety matters. These programs will be employed for the Mt. Simon Hub. WCSUS also supports statewide underground utility damage prevention

programs, and, as stated earlier, the MSH Pipeline will participate in the 811 One-Call System. In addition, WCSUS will develop an alert system that will automatically, and almost instantaneously, notify local government authorities and first responders of a leak or discharge, through automated telephone notifications.

60. Operational safety is of the utmost importance to WCSUS. Upon completion of construction of the MSH Pipeline, in addition to the remote-control capabilities described above, WCSUS and its contractors will maintain emergency response equipment and personnel at strategic points along the route and train their personnel to respond to any pipeline emergencies. In addition, WCSUS has been, and will continue, to coordinate with and train local emergency responders and authorities in preventing and responding to any pipeline-related problems. WCSUS will initiate a series of meetings with local emergency responders and authorities from areas that will be crossed by the MSH Pipeline for emergency planning and emergency response topics. Through an affiliate company, WCSUS has extensive experience operating the ACTL system, an existing 8"-16" CO₂ capture and transportation system. ACTL's Emergence Response Plan ("ERP") deploys a robust incident command structure and utilizes an Emergency Planning Zone, ("EPZ") developed by comprehensive plume models. ACTL's ERP has been in successful operation since 2019. A similar emergency response plan for the Mt. Simon Hub is being prepared that will include integration with geohazard identification and will be in place prior to commencing operation. In development of that plan, WCSUS is coordinating (through the meetings described above and other means) with emergency response departments along, and in proximity to, the route, to ensure they and any mutual aid parties are informed of the operation risks and equipped to respond in the unlikely event of a release. WCSUS anticipates that, taking into account information obtained through meetings and other interactions with emergency response

departments and other first responders, it will be able to share a draft emergency response plan with these agencies for feedback. Further, throughout operation of the Mt. Simon Hub, WCSUS will conduct and host emergency response drills with its employees and local emergency responders, which will include planned drills, desktop events, and simulated field events.

VII. PUBLIC OUTREACH AND EASEMENT ACQUISITION

61. The landowners listed in **Exhibit F** are the landowners within the Notification Corridor along the Illinois route depicted in **Exhibit D** and described in **Exhibit E**. WCSUS has used a multi-step process to ensure proper identification of potentially affected landowners using records from county tax collector, tax assessor, and recorder offices. This process begins with identifying landowners using a third-party geospatial database called ReportAll. ReportAll provides landowner information using county tax assessor records, which are publicly accessible. WCSUS then validates and, as necessary, updates this information by (1) searching for and pulling relevant vesting deeds for each property and (2) reviewing relevant records for each property at the county tax collector's office for each county the MSH Pipeline will cross. Within 30 days prior to filing this Application, WCSUS arranged for an additional review of the records of the tax collector in each county the pipeline will cross to determine whether any changes or updates were required to the list of landowners located within the Notification Corridor. As the result of this process, the landowners listed on Exhibit F to this Application comprise the landowners of record located within the proposed project route width in Illinois, and in fact within the Notification Corridor, as disclosed by the records of the tax collector in each county in which the MSH Pipeline will be located not more than 30 days before the date of filing of this Application. WCSUS will also conduct a historical title search for the properties on which easements will be sought to ensure it has a complete and accurate record of any relevant interests in those properties.

62. WCSUS is seeking a 50-foot permanent easement along the entirety of the pipeline system. Construction of the up to 20-inch diameter Trunkline will require a 75-foot easement for temporary construction workspace. Areas of additional temporary workspace will be required at occasional and specific locations to accommodate crossings of roads, wetlands, railways, waterbodies, existing utilities, and other locations. WCSUS will also seek occasional access road agreements from landowners to facilitate construction access to locations where entry down the right-of-way is not feasible. All easement areas, except for any above ground appurtenances, will be restored to preconstruction conditions as practical, and temporary construction easements will revert to the landowner upon completion of installation and the pipeline being placed in service. Launcher/receiver sites and valve locations will be fenced in and graveled, and the remainder of the permanent easement will revert to pre-construction conditions and use with the necessary restrictions expressed in the easement agreement to ensure safe and reliable operation of the pipeline.

63. As provided for in Section 75/20(d) of the CO₂ Act, WCSUS is requesting approval of a 200-foot project route width along the proposed route of the Mt. Simon Hub in Illinois. The 200-foot project route width will allow for minor deviations of the route within that width to accommodate landowner concerns and other site-specific conditions that are encountered. The final route and 200-foot project route width will fall within the Notification Corridor along the route depicted on **Exhibit D** and described in **Exhibit E**

64. WCSUS experienced team developed and is implementing a Right of Way (“ROW”) acquisition plan. WCSUS and its agents perform research to identify and locate potentially affected landowners, share company and MSH Pipeline information with landowners along the pipeline route, solicit landowner input and specific information about their property to

use in the routing process, and when possible, adjust the pipeline location and installation method to accommodate landowner interests and concerns. WCSUS has retained experienced ROW firms to perform voluntary good faith negotiations with landowners on behalf of WCSUS. WCSUS has engaged with a third party to conduct Land Value Market Studies in each County in an effort to ensure that WCSUS has a real understanding of the value of land in each County and can, in good faith, make offers to acquire easements with fair compensation. WCSUS will compensate landowners at or above fair market values for the land interests acquired and pay for anticipated and experienced damages such as crop losses resulting from construction, along with inconvenience and unanticipated construction damages. Such damages are expected to be minimized by implementing construction mitigation and restoration measures specified in the AIMA and individual landowner agreements.

65. WCSUS commissioned detailed MSH-specific market studies that analyzed local property values based on a multitude of factors to guide the base offers WCSUS is extending for easements and other land rights. Offers may be presented as options for an easement or purchase of an easement, along with the underlying easement agreement itself. These documents specify the payment terms, the limited rights WCSUS is seeking, and the rights retained by the landowner. Offers are made in writing, with appropriate legal descriptions and property sketches identifying the intended location of the pipeline and/or extent of easements. WCSUS is committed to having multiple direct contacts with each landowner to provide company and MSH Pipeline information, secure survey permissions, discuss and address concerns, gather relevant property specific information, and present and negotiate offers. WCSUS has and will comply with the Commission's requirements in 83 Illinois Administrative Code Part 302 regarding information and notice provided to landowners and the conduct of its representatives in contacting and negotiating with

landowners. WCSUS also developed and will communicate materials beyond those required by law regarding facts about the company, the MSH Pipeline, pipeline construction, agricultural impact mitigation, and other topics of interest to landowners. By implementing and adhering to the above-described measures, WCSUS is confident it can acquire the necessary land rights through good-faith negotiations.

66. WCSUS co-hosted two informational events on May 17, 2022, and again on December 12, 2022, for local leaders to learn about carbon sequestration. The events were held at Richland Community College at the National Sequestration Education Center located in Decatur, Illinois. ADM provided tours for event attendees of the ADM storage and injection locations along with the monitoring wells. WCSUS Exhibit 4.2 and WCSUS Exhibit 4.3, supported by the Direct Testimony of Tracey McDaneld attached as WCSUS Exhibit 4.0, are the slide decks that were presented by WCSUS to the attendees of the informational meetings.

67. Notice letters to local governments and public officials where the proposed pipeline will be located, identified in Exhibit H (Notification List), will be sent concurrent with filing this Application or shortly thereafter. Newspaper notices are planned to be published in a newspaper in each county in which the MSH Pipeline will be located following submittal of this Application. Proofs of publication will be filed with the Commission upon receipt or as exhibits to testimony. Exhibit I (Copies of Notifications) contains the form of notice letter and maps that will be sent to local governments and public officials as referenced above.

68. It is WCSUS's intent and goal to acquire the necessary land rights to construct and operate the MSH Pipeline through good-faith voluntary negotiations with all landowners. WCSUS's ROW team will extend offers to, and negotiate with, landowners for ROW easements in compliance with the provisions prescribed in the 83 Ill. Adm. Code §§302.30 & 302.40.

WCSUS will not exercise eminent domain authority allowed by 220 ILCS 75/20(i)(2) until it has used reasonable and good faith efforts to acquire the necessary property or easement, and further will only exercise such authority once WCSUS has determined that the property or easement is necessary to avoid unreasonable delay or economic hardship to the progress of activities carried out pursuant to the certificate of authority.

VIII. REQUEST FOR SERVICE LIST ADDITIONS

69. WCSUS requests that the persons shown below be placed on the official service list maintained by the Chief Clerk for this proceeding. Pursuant to 83 Illinois Administrative Code §200.1050, WCSUS agrees to accept service by electronic means:

David Streicker
Benjamin Jacobi
Sean Pluta
Polsinelli PC
150 North Riverside Plaza
Suite 3000
Chicago, IL 60606

bjacobi@Polsinelli.com
spluta@polsinelli.com

IX. CONCLUSION

70. For the reasons stated in this Application, WCSUS respectfully requests entry of an order:

- (a) granting WCSUS a certificate of authority pursuant to the Carbon Dioxide Transportation and Sequestration Act authorizing WCSUS to construct and operate a new carbon dioxide transportation pipeline along the route (and within the project route width) in Illinois depicted in Exhibit D and described in Exhibit E to this Application (as such route may be updated during the course of this proceeding), as a carbon dioxide pipeline, with such order to include authority for a 200 foot project width around the approved route, as permitted by Section 75/20(d) of the Carbon Dioxide Transportation and Sequestration Act;

- (b) authorizing WCSUS, as authorized by Section 75/20(i) of the Carbon Dioxide Transportation and Sequestration Act , to acquire an easement in any property or interest in property for the construction, maintenance, or operation of the carbon dioxide pipeline, including the permanent and temporary construction easement rights, as described herein, along the route of the new carbon dioxide pipeline in Illinois, as depicted in Exhibit D and described in Exhibit E to this Application (as such route may be updated during the course of this proceeding); and
- (c) granting such other and further relief as may be appropriate in the circumstances of this case.

Respectfully submitted,

WOLF CARBON SOLUTIONS US LLC

Re: Wolf Carbon Solutions US, LLC
Mt. Simon Hub Proposed Pipeline Project
Illinois Commerce Commission Docket No.

To: All Interested Parties

On June XX, 2023, Wolf Carbon Solutions US, LLC (“WCSUS”) filed an application with the Illinois Commerce Commission (“ICC”) requesting authorization for the issuance to it of a Certificate of Authority pursuant to the Carbon Dioxide Transportation and Sequestration Act (“CO2 Act”) (220 ILCS 75/1 et seq.) authorizing WCSUS to design, construct, and operate the Illinois pipeline portion of the Mt. Simon Hub Pipeline System (“MSH”) and appurtenant facilities. As a local government leader, you are receiving this letter because the proposed route of the pipeline may pass within your jurisdictional boundaries. This letter includes information about the pipeline, contact information for WCSUS, and map enclosures depicting the proposed system.

WCSUS intends to construct, install, operate, and maintain approximately 166 miles of up to 20-inch outside diameter pipeline and approximately 33 above-ground facilities. The state-of-the-art CO2 capture, pipeline, and sequestration system will safely capture and transport CO2 from ethanol facilities in Cedar Rapids and Clinton, Iowa, to a storage facility in the Mt. Simon geological formation near Decatur, Illinois. The pipeline will be constructed with spare capacity, capable of servicing additional third-party customers in the surrounding area looking to lower their CO2 emissions.

WCSUS is negotiating with Archer-Daniels-Midland Company (ADM) as the foundational customer and with several other industrial producers across the pipeline footprint in both Iowa and Illinois. When fully expanded, the system will be able to capture, transport, and store up to 12 MMT of CO2 annually. Pending receipt of necessary regulatory approvals, construction of the MSH is anticipated to commence in the second quarter of 2025, with in-service commencing in late 2025.

A copy of the WCSUS application and exhibits are available on the ICC’s e-Docket system at <https://www.icc.illinois.gov/docket/P2023-XXXX>. The filing has been designated as Docket No. 23-XXXX.

Wolf is committed to working with you to address any questions or concerns you may have. You can send an e-mail to mtsimonhub@wolfcarbonsolutions.com or call 1-800-501-5597 to talk with a WCSUS representative. We look forward to answering any questions you may have.

Sincerely,

Tracey McDanel
Director, Government Relations, and Land Services
