BLACK LIME—NOW AVAILABLE TO PEI FARMS

After years of successful on-farm research (including PEI Living Labs in potato rotation), Irving Black Lime is now available with an approved federal label. Black Lime:

- corrects acidic soils;
- supply valuable liming benefits;
- reduce reliance on expensive conventional agricultural lime (*only cost is trucking!*); and
- provide nutrients such as phosphorus, calcium, magnesium, and sulfur

FIELD CARBON™—TURNING FARM PRACTICES INTO VERIFIED CARBON CREDITS

Farmers are already making decisions that can reduce greenhouse gas emissions. FieldCarbon™ turns those actions into credible, measurable, and independently verifiable results – without complicated carbon accounting for farmers.

You keep doing what you do best—farming. LP Consulting works behind the scenes to manage the technical and verification requirements and connect results with emerging carbon opportunities.

Built from the farm up, FieldCarbon™ is now completing the final verification step, essential for our global launch.
Stay tuned to see what comes next!

INTERESTED IN BLACK LIME OR FIELD CARBON™?
