

Preparing for the storm is *As* AMERICAN *as* SCIENCE.

Storms make or break harvests.

Fires threaten towns.

Floods shut down roads, power, and supply chains.

\$10 trillion of the American economy is weather-sensitive.

The National Center on Atmospheric Research exists to protect it.

NCAR science cuts the cost of natural disasters.

Guides firefighters before flames spread.

Keeps flights moving. Energy affordable. Crops insured.

NCAR saves lives.

Strengthens national security.

And delivers tens of billions in value—at a fraction of the cost.

Other nations are racing to match America's weather and forecasting advantage.

If we stop investing, they won't wait.

American science can see the storm coming. But it can't fund itself.

That depends on the leadership of those we send to Washington.

Keep NCAR *funded*. Keep America *prepared and protected*.
