Did you know that a fractured tooth may be completely painless, but can cause very serious infection, bone loss and even the loss of the tooth?

It's true! Tiny cracks in a tooth act like a freeway for bacteria to get inside the tooth and surrounding bone, where they multiply, infect the tooth, and erode the supporting bone. If you notice a small bump in your gum in the area of a tooth root, get it checked as early as possible! You may be saving your tooth and your overall health.

We've come a long way!
Dentistry with a Difference.
