The saxophone was invented

by Belgian instrument designer Antoine-Joseph "Adolphe" Sax in the

1840s. In 1846, he patented seven saxophone designs for orchestral use

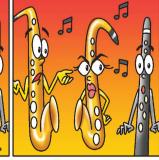

and another seven designs for military bands. His new instruments did not

gain popularity for orchestral use, but

Face The Music

were instantly popular with military

bands.

saxophone players include Charlie Parker, John Coltrane, Stan Getz, Sonny Rollins, Lester Young and Coleman Hawkins.

Day. Saxophones are considered members of the woodwind family of instruments because they create sound using a vibrating reed.

When Sax first introduced his new instrument to audiences in the 1840s, he sometimes played from behind a curtain so that his design could not be copied by other instrument makers.

xophones prefer to shop Sax 5th Avenue.

The saxophone is one of the few popular instruments in the world known to be invented by a single individual.

didn't the saxophone player get the job?

He blew it.

GAME ANSWERS: L. Mouthpiece is different. 2. Eyes are moved. 3. Instrument is longer 4. Valv. 15 missing. 5. Nose is smaller. 6. Note is moved. Most saxophones have between 20 and 23 keys.

When a key is pressed, it raises or lowers a pad that opens or closes a hole in the body of the saxophone. The open holes change the pitch by lengthening or shortening the vibrating column of air inside the
