Covering coughs and sneezes helps stop the spread of the germs that cause illnesses like colds and flu.

WAA-CHOO!

HEY! DABBING!

THAT'S A PRETTY COOL WAY TO SNEEZE!

A cough travels as fast as 50 mph and expels almost 3,000 droplets at a time. A sneeze can travel as fast as 100 mph and create more than 100,000 droplets. That's why it's important to cover your mouth when you cough or sneeze!

Use a tissue when you cough or sneeze. If you don't have a tissue, then use your elbow.

Wash your hands with soap and water, especially after coughing, sneezing or blowing your nose.

TRUE but STRANGE

Look at the weather section in today's paper ... what's the coldest place you can find?
