

BIG NATE

I HEARD YOU ON THE MORNING ANNOUNCEMENTS NATE. NICELY DONE.

I ESPECIALLY LIKED YOUR SIGN-OFF. JUST A SIMPLE "BYE." YOU DIDN'T TRY TO BE FUNNY OR CLEVER.

YOU WERE BLAND AND INFORMATIVE. THAT'S EXACTLY WHAT MORNING ANNOUNCEMENTS SHOULD BE.

YOU'VE GOT THE 70-YEAR-OLD SCIENCE TEACHERS ON YOUR SIDE!

THAT HURT.

DILBERT

YESTERDAY SOMEONE DISAGREED WITH ME, AND I CHANGED HIS MIND USING DATA AND REASON.

THAT ISN'T POSSIBLE.

I DIDN'T THINK SO EITHER, BUT IT HAPPENED.

SMELLS LIKE A TRAP.

I COULDN'T SLEEP ALL NIGHT.

If you rub an inflated balloon on your hair, you create static electricity. All materials are made of tiny particles called atoms, and all atoms contain even tinier particles called electrons. Rubbing the balloon on your hair causes it to steal electrons and be negatively charged while your hair is left positively charged ... and opposites attract! In the same way, if you rub a balloon on your hair and then hold it near an empty aluminium can, the can will move toward the balloon!

If it takes 24 clowns 24 minutes to blow up 24 balloons, how many clowns would be required to blow up 72 balloons in 72 minutes?

When an inflated balloon bursts, the torn pieces of latex contract at supersonic speed, which contributes to the loud popping noise.

TRUE but STRANGE

Use the News

Onomatopoeia is when a word mimics the sound of the action or object it describes. POP is an example of this. Can you find another example in today's paper?

Answer: 24. They have three times as many balloons to blow up, but they have three times as long to do it.
