

Bringing Advanced Aortic Aneurysm Care to Our Communities

Exceptional Care. Lifesaving Innovation. Close to Home.

Guthrie is excited to bring you a new, advanced treatment for complex aortic aneurysms: Thoracoabdominal Branch Endoprosthesis (TAMBE). This minimally invasive option is the first FDA-approved device of its kind, **offering high-risk patients a safer alternative to open surgery with faster recovery and fewer complications.**

TAMBE uses innovative technology to repair aneurysms in both the chest and abdomen while keeping blood flowing to vital organs.

Until now, this treatment wasn't available in most community hospitals. Now, Guthrie is proud to offer this advanced care right here at home.

Learn more about our Vascular Surgery team by visiting www.Guthrie.org/TAMBE.
