Statewide Faith Group Endorses Science Standards

The Wyoming Association of Churches (WAC) endorses the Next Generation Science Standards (NGSS). WAC is calling upon the Wyoming State Board of Education to adopt this comprehensive, peer reviewed science standards, which include climate change science.

WAC believes that God gave us the responsibility to serve as stewards of the created order. Science, on the other hand, is not based upon a belief system but rather a field of study dedicated to the understanding of how the created order works. Therefore, WAC strongly supports the advancement of an education system founded upon 21st century evidence-based science standards, like NGSS, which encourage Wyoming students to think critically, and through greater knowledge, foster stewardship of the created order.

Fear not. Be bold. Do justice.
