

Wandering wildcats

Tracking-collar data shows the approximate movements of three bobcats across Tumamoc Hill over two weeks ending Jan. 3. The two females, nicknamed Margaret and Elsie, seem to share the same range, while the male, known as Val, wanders a far larger area. The cats were collared as part of the ongoing Bobcats in Tucson Research Project.

Last 14 days locations:

- Bobcat #18 "Val"
- Bobcat #12 "Margaret"
- ▲— Bobcat #20 "Elsie"
