NEW YORK TIMES

Clinging to the small island where the whole of Japan's navy is in action, a convoy of enemy shipshas been blasted by American planes in the north Pacific, the Department of War said today.

The attack was launched in the early hours of this morning, when the convoy was reported to be forming up for a raid on a key Allied base in the east Pacific.

American planes, operating from bases in the Aleutians, attacked the convoy with a combination of fighters, bombers and dive-bombers, inflicting heavy damage on the enemy vessels.

The attack was part of a continuing campaign by Allied forces to disrupt the enemy's supply lines and disrupt the flow of resources to the Japanese military.

American forces have been engaged in a series of successful attacks on Japanese ships, destroyers and transport vessels in recent weeks, inflicting heavy losses on the enemy.

The success of these attacks has been due to the effective use of American air power, which has been able to strike the enemy from the air without the need for costly landings or ground forces.

The convoy targeted was a key element in Japan's supply system, and its destruction has had a significant impact on the enemy's ability to maintain its forces.

The attack was part of a larger campaign by Allied forces in the Pacific, which is continuing to put pressure on the Japanese and to push them towards the end of the war.

American forces have already taken a number of key bases in the Pacific, and are now closing in on the enemy's main bases in the area.

The success of these operations has been due to the effective use of American air power, which has been able to strike the enemy from the air without the need for costly landings or ground forces.
