

## OKLAHOMA

### SUMMARY

- Oklahoma is in the red zone for cases, indicating more than 100 new cases per 100,000 population last week, with the 5th highest rate in the country. Oklahoma is in the yellow zone for test positivity, indicating a rate between 5% and 10%, with the 5th highest rate in the country.
- Oklahoma has seen stability in new cases and a decrease in test positivity over the last week.
- The following three counties had the highest number of new cases over the last 3 weeks: 1. Tulsa County, 2. Oklahoma County, and 3. Cleveland County. These counties represent 42.4% of new cases in Oklahoma.
- 65% of all counties in Oklahoma have moderate or high levels of community transmission (yellow or red zone), with 34% having high levels of community transmission (red zone).
- During the week of Aug 31 - Sep 6, 13% of nursing homes had at least one new resident COVID-19 case, 19% had at least one new staff COVID-19 case, and 5% had at least one new resident COVID-19 death.
- Oklahoma had 142 new cases per 100,000 population in the last week, compared to a national average of 74 per 100,000.
- Current staff deployed from the federal government as assets to support the state response are: 3 to support operations activities from FEMA; 7 to support epidemiology activities from CDC; 60 to support medical activities from VA; and 1 to support operations activities from VA.
- Between Sep 5 - Sep 11, on average, 77 patients with confirmed COVID-19 and 75 patients with suspected COVID-19 were reported as newly admitted each day to hospitals in Oklahoma. An average of 84% of hospitals reported either new confirmed or new suspected COVID patients each day during this period; therefore, this may be an underestimate of the actual total number of COVID-related hospitalizations. Underreporting may lead to a lower allocation of critical supplies.

### RECOMMENDATIONS

- Establish statewide mask mandate. COVID-19 is being brought into nursing homes through community transmission. Review and improve infection control practices at nursing homes to stop the introduction of COVID-19. Arkansas is a great example in the Heartland where statewide transmission has decreased through mask usage.
- In areas with ongoing high levels of transmission (red and yellow zones), use standard metrics to determine school learning options and capacity limits for bars and indoor dining.
- Develop a plan for increased surveillance of silent community spread by using the Abbott BinaxNOW or antigen tests. Establish weekly surveillance among critical populations to monitor degree of community spread among K-12 teachers; staff working at nursing homes, assisted living, and other congregate living settings; prison staff; and first responders as tests become available.
- In university settings, use wastewater surveillance across campus to identify areas with high viral load for targeted testing. Work with student leaders, including Greek organizations, to establish effective testing strategies to find cases early, prevent spread, and keep students on campus.
- Tribal Nations: Encourage the continued enforcement of social distancing and masking measures in areas of increased transmission. Continue enhanced testing activities. Continue to enhance contact tracing and ensure that cases and contacts can quarantine or isolate safely. Monitor testing data to identify additional sites of increased transmission and ensure focused public health resources for these vulnerable communities. Ensure all Tribal Nations are aware of the significant risk from asymptomatic transmission during gatherings or ceremonies.
- Specific, detailed guidance on community mitigation measures can be found on the [CDC website](https://www.cdc.gov).

## OKLAHOMA

STATE REPORT | 09.13.2020

	STATE, LAST WEEK	STATE, % CHANGE FROM PREVIOUS WEEK	FEMA/HHS REGION, LAST WEEK	UNITED STATES, LAST WEEK
<b>NEW COVID-19 CASES</b> (RATE PER 100,000)	<b>5,603</b> (142)	<b>-3.0%</b>	<b>41,196</b> (96)	<b>243,676</b> (74)

**Testing:** Combination of CELR (COVID-19 Electronic Lab Reporting) state health department-reported data and HHS Protect laboratory data (provided directly to Federal Government from public health labs, hospital labs, and commercial labs) through 9/9/2020. Last week is 9/3 - 9/9; the week one month before is 8/6 - 8/12.

# METHODS

STATE REPORT | 09.13.2020

**COLOR THRESHOLDS:** Results for each indicator should be taken in context of the findings for related indicators (e.g., changes in case incidence and testing volume)

Metric	Green	Yellow	Red
New cases per 100,000 population per week	<10	10-100	>100
Percent change in new cases per 100,000 population	<-10%	-10% - 10%	>10%
Diagnostic test result positivity rate	<5%	5%-10%	>10%
Change in test positivity	<-0.5%	-0.5%-0.5%	>0.5%
Total diagnostic tests resulted per 100,000 population per week	>1000	500-1000	<500
Percent change in tests per 100,000 population	>10%	-10% - 10%	<-10%
COVID-19 deaths per 100,000 population per week	<1	1-2	>2
Percent change in deaths per 100,000 population	<-10%	-10% - 10%	>10%
Skilled Nursing Facilities with at least one resident COVID-19 case, death	<1%	1%-5%	>5%
Change in SNFs with at least one resident COVID-19 case, death	<-1%	-1%-1%	>1%

## DATA NOTES

- Some dates may have incomplete data due to delays in reporting. Data may be backfilled over time, resulting in week-to-week changes. It is critical that states provide as up-to-date data as possible.
- Cases and deaths:** County-level data from USAFacts as of 21:00 EDT on 09/13/2020. State values are calculated by aggregating county-level data from USAFacts; therefore, values may not match those reported directly by the state. Data are reviewed on a daily basis against internal and verified external sources and, if needed, adjusted. Last week data are from 9/5 to 9/11; previous week data are from 8/29 to 9/4; the week one month before data are from 8/8 to 8/14.
- Testing:** The data presented represent viral COVID-19 laboratory diagnostic and screening test (reverse transcription polymerase chain reaction, RT-PCR) results—not individual people—and exclude antibody and antigen tests. CELR (COVID-19 Electronic Lab Reporting) state health department-reported data are used to describe county-level viral COVID-19 laboratory test (RT-PCR) result totals when information is available on patients' county of residence or healthcare providers' practice location. HHS Protect laboratory data (provided directly to Federal Government from public health labs, hospital labs, and commercial labs) are used otherwise. Some states did not report on certain days, which may affect the total number of tests resulted and positivity rate values. Because the data are deidentified, total viral (RT-PCR) laboratory tests are the number of tests performed, not the number of individuals tested. Viral (RT-PCR) laboratory test positivity rate is the number of positive tests divided by the number of tests performed and resulted. Resulted tests are assigned to a timeframe based on this hierarchy of test-related dates: 1. test date; 2. result date; 3. specimen received date; 4. specimen collection date. Resulted tests are assigned to a county based on a hierarchy of test-related locations: 1. patient residency; 2. provider facility location; 3. ordering facility location; 4. performing organization location. States may calculate test positivity other using other methods. Last week data are from 9/3 to 9/9; previous week data are from 8/27 to 9/2; the week one month before data are from 8/6 to 8/12. HHS Protect data is recent as of 12:00 EDT on 09/13/2020. Testing data are inclusive of everything received and processed by the CELR system as of 19:00 EDT on 09/12/2020.
- Mobility:** Descartes Labs. These data depict the median distance moved across a collection of mobile devices to estimate the level of human mobility within a locality. The 100% represents the baseline mobility level prior to the pandemic; lower percent mobility indicates less population movement. Data is anonymized and provided at the locality level. Data is recent as of 12:00 EDT on 09/13/2020 and is through 9/11/2020.
- Hospitalizations:** Unified hospitalization dataset in HHS Protect. This figure may differ from state data due to differences in hospital lists and reporting between federal and state systems. These data exclude psychiatric, rehabilitation, and religious non-medical hospitals. In addition, hospitals explicitly identified by states/regions as those from which we should not expect reports were excluded from the percent reporting figure. The data presented represents raw data provided; we are working diligently with state liaisons to improve reporting consistency. Data is recent as of 20:00 EDT on 09/13/2020.
- Skilled Nursing Facilities:** National Healthcare Safety Network (NHSN). Data report resident and staff cases independently. Quality checks are performed on data submitted to the NHSN. Data that fail these quality checks or appear inconsistent with surveillance protocols may be excluded from analyses. Data presented in this report are more recent than data publicly posted by CMS. Last week is 8/31-9/6, previous week is 8/24-8/30.
