

LOW-DOSE CT

FOR LUNG CANCER SCREENINGS

is it for me?

WHAT IS LOW-DOSE CT (LDCT)?

It's a quick, painless scan that uses a small amount of radiation to take detailed pictures of your lungs. It helps providers find lung cancer early, before symptoms start, when it's easier to treat.

QUICK FACTS

- When caught in Stage I, lung cancer has a five-year survival rate of 70-90%.
- LDCT is quick and easy. The screening only takes a few minutes.
- Most insurance plans cover LDCT screenings. If not, Mon Health offers it for just \$99.

DO I QUALIFY?

- Are you 50-80 years old?
- Do you currently smoke or did you quit in the last 15 years?
- Have you smoked a pack a day for 20 years or two packs a day for 10 years?

If you answered YES to these questions, LDCT screening is for you.

LDCT screening can save your life.
